

SCHEME AND SYLLABI

FOR

THIRD TO EIGHTH SEMESTERS

OF

BACHELOR OF TECHNOLOGY

IN

PRODUCTION ENGINEERING

FROM 2009 ADMISSION ONWARDS

CALICUT UNIVERSITY (P.O), THENHIPALAM

PRODUCTION ENGINEERING**3rd Semester**

Code	Subject	Hours/week			Marks		Sem- end duration-hours	Credits
		L	T	P/D	Internal	Sem-end		
EN09 301	Engineering Mathematics III	3	1	-	30	70	3	4
EN09 302	Humanities and Social Sciences	2	1	-	30	70	3	3
PE09 303	Electrical Drives and Automation	4	1	-	30	70	3	5
PE09 304	Mechanics of Solids	3	1	-	30	70	3	4
PE09 305	Metallurgy and Material Science	3	1	-	30	70	3	4
PE09 306	Machine Tool Technology	3	1	-	30	70	3	4
PE09 307(P)	<i>Production Engineering Drawing</i>	-	-	3	50	50	3	2
PE09 308(P)	<i>Machine Tool Lab-I</i>	-	-	3	50	50	3	2
	Total	18	6	6				28

4th Semester

Code	Subject	Hours/week			Marks		Sem- end duration-hours	Credits
		L	T	P/D	Internal	Sem-end		
EN09 401(A)	Engineering Mathematics IV	3	1	-	30	70	3	4
EN09 402	Environmental Science	2	1	-	30	70	3	3
PE09 403	Theory of Machines	4	1	-	30	70	3	5
PE09 404	Fluid Mechanics and Machinery	3	1	-	30	70	3	4
PE09 405	Design of Machine Elements	3	1	-	30	70	3	4

 CE09 L25 Experimental Stress Analysis

EN09 301: Mathematics III

Teaching scheme

3 hours lecture and 1 hour tutorial per week

Credits: 4

Module I (14 hours)

Linear Algebra (Proofs not required)

Vector spaces – Linear dependence and independence and their computation – Bases and dimensions – Subspaces – Inner product spaces – Gram – Schmidt orthogonalisation process- Linear transformation – Elementary properties of linear transformations – matrix of linear transformation. (Proofs of theorems omitted)

Module II (14 hours)

Fourier integral theorem (proof not required) – Fourier sine and cosine integral representation – Fourier transforms – Fourier sine and cosine transforms – Properties of Fourier transforms – Singularity functions and their Fourier transforms

Module III (13 hours)

Probability Distributions

Random variables – Mean and variance of probability distributions – Binomial and Poisson distributions – Poisson approximation to binomial distribution – Hypergeometric and geometric distributions – Probability densities – Normal, uniform and gamma distributions

Module IV (13 hours)

Theory of Inference

Population and samples – Sampling distributions of mean and variance – Point and interval estimations – Confidence intervals for mean and variance – Tests of hypotheses – Hypotheses concerning one mean, two means, one variance and two variances – Test of goodness of fit.

Text Books

Module I

Erwin Kreysig, Advanced Engineering Mathematics, 8e, John Wiley & Sons Inc.

Sections: 12. 3, 12.4, 12.5, 12.6, 12.7, 12.9

Module II

Erwin Kreysig, Advanced Engineering Mathematics, 8e, John Wiley & Sons Inc.

Sections: 13.1,13.2,13.3,13.4,14.4,15.1,15.2,15.3,15.4

Module III

Bernaed Kolman, David R Hill, Introductory Linear Algebra, An Applied First Course, Pearson Education

Sections: 6.1, 6.2, 6.3, 6.4, 6.7,6.8, Appendix B 1

Module IV

Wylie C R & L C Barrett, Advanced Engineering Mathematics, Mc Graw Hill

Sections: 9.1,9.3, 9.5

Internal Continuous Assessment (*Maximum Marks-30*)

60% - Tests (minimum 2)

30% - Assignments (minimum 2) such as home work, problem solving, group discussions, quiz, literature survey, seminar, term-project, software exercises, etc.

10% - Regularity in the class

University Examination Pattern

PART A: Short answer questions (one/two sentences)

5 x 2 marks=10 marks

All questions are compulsory. There should be at least one question from each module and not more than two questions from any module.

PART B: Analytical/Problem solving questions

4 x 5 marks=20 marks

Candidates have to answer four questions out of six. There should be at least one question from each module and not more than two questions from any module.

PART C: Descriptive/Analytical/Problem solving questions

4 x 10 marks=40 marks

Two questions from each module with choice to answer one question.

Maximum Total Marks: 70

EN09 302: Humanities and Social Sciences

(Common to all)

Teaching scheme

2 hours lecture and 1 hour tutorial per week

Credits: 3

Module I(9 hours)

Introduction to English usage and grammar

Review of grammar - affixes, prefixes, suffixes, participles and gerunds - transformation of sentences - commonly misspelt words - correction of mistakes - punctuation - idioms - style - vocabulary building

Reading comprehension -Exposure to a variety of reading materials, articles, essays, graphic representation, journalistic articles, etc.

Writing comprehension-Skills to express ideas in sentences, paragraphs and essays

Module II (9 hours)

Technical communication and report writing

Need, importance and characteristics of technical communication – correspondence on technical matters-aspects of technical description of machinery, equipment and processes - giving instructions in an industrial situation - note taking and note making - correspondence on technical topics - different types of technical reports

Module III (9 hours)

History of science and technology

Science and technology in the primitive society – the development of human civilization from primitive to modern society- impact of sciences and technology on societies – Cultural and industrial revolutions - the rise and development of early Indian science – contribution of Indian scientist-JC Bose, CV Raman, Visweswaraya-Ramanujam and Bhabha- Gandhian concepts- recent advances in Indian science

Module IV (9 hours)

Humanities in a technological age

Importance of humanities to technology, education and society - relation of career interests of engineers to humanities - relevance of a scientific temper - science, society and culture

Internal Continuous Assessment (Maximum Marks-30)

60% - Tests (minimum 2)

30% - Assignments (minimum 2) such as home work, problem solving, group discussions, quiz, literature survey, seminar, term-project, software exercises, etc.

10% - Regularity in the class

University Examination Pattern

PART A: Short answer questions (one/two sentences) 5 x 2 marks=10 marks All questions are compulsory. There should be at least one question from each module and not more than two questions from any module. *PART B: Analytical/Problem solving questions 4 x 5 marks=20 marks* Candidates have to answer four questions out of six. There should be at least one question from each module and not more than two questions from any module. *PART C: Descriptive/Analytical/Problem solving questions 4 x 10 marks=40 marks* Two questions from each module with choice to answer one question. *Maximum Total Marks: 70*

PE09 303: Electrical Drives and Automation

Teaching scheme

4 hours lecture and 1 hour tutorial per week

Credits: 5

Objectives

- To impart the basic concepts of Electric drives
- To give concepts on microprocessors, PLC automation
- To give awareness on specific applications in industries

Module I (18 Hours)

D.C Machines and Transformers:

Transformers: Single Phase transformers – Construction - Principle of operation - e.m.f.equation – equivalent circuit – phasor diagram - O.C. and S.C test – efficiency – voltage regulation

D.C. machines: D.C. Generators – construction details – e.m.f.equation – different types – magnetization and load characteristics – D.C. motors – Principle of operation – torque and speed equations – back e.m.f. – Performance characteristics and applications of shunt, series and compound motors.

Module II (18 hours)

Synchronous and Induction machines – Only the basic concepts and equations

Synchronous machines – construction details – types – rotating magnetic field (concepts only) – chording factor and distribution factor (no derivation) - e.m.f. equation - Synchronous motors – principle of operation.

Induction motor – Construction – types - principle of operation – slip - torque equation – torque slip characteristics.

Single phase induction motors – double field revolving theory - capacitor start motors – capacitor start and run motors – applications.

Module III (18 hours)

Digital systems and Microprocessors

Review on Digital circuits (gates, flip flops) – Half adder & full adder - Asynchronous and synchronous counter – 555 Timer IC – applications.

Introduction to Microprocessor – block diagram of microcomputer – CPU – architecture of Intel 8085 – Memory mapping concepts – memory decoding - Execution of instruction and timing considerations – Programming of microprocessors instruction types – addressing modes – Intel 8085 instruction set – simple assembly language programs and examples – Microprocessor applications – Microprocessor based temperature control – Microprocessor based speed control (Block diagram approach only).

Module IV (18 hours)

Industrial drives and control

Introduction to Electric drives – control schemes – Speed control – Components of Electric drives: Motors, Power electronic controllers (Block diagram approach)

Industrial applications of electric drives: Synchronous motor drives, Induction motor drives, D C motor drives. Selection of drives for general factory – Cement mill, Rolling mill, Paper mill, Coal mines, textile mill, machine tool drives.

PLC automation : Introduction – Overview of PLC systems – Theory of operation – Ladder logic – Programming concepts – simple program – Case study of simple PLC system

Text Books

Module I & II

D.P. Kothari, I.J.Nagarath, *Electric Machines*, Tata Mcgraw Hill.

J.B.Gupta, *Theory and Performance of Electrical machines*, S.K.Kataria and Sons

Module III

B.RAM, *Microporocessors*, Dhanpat Rai & Sons

Module IV

N.K.De, P.E.Sen, *Electric drives*, Prentice hall India

W.Bolton, *Programmable Logic Controllers*, Academic Press.

Reference Books

H.Cotton, *Electrical technology*, ELBS

Internal Continuous Assessment (Maximum Marks-30)

60% - Tests (minimum 2)

30% - Assignments (minimum 2) such as home work, problem solving, group discussions, quiz, literature survey, seminar, term-project, software exercises, etc.

10% - Regularity in the class

University Examination Pattern

PART A: Short answer questions (one/two sentences) 5 x 2 marks=10 marks All questions are compulsory. There should be at least one question from each module and not more than two questions from any module. *PART B: Analytical/Problem solving questions 4 x 5 marks=20 marks* Candidates have to answer four questions out of six. There should be at least one question from each module and not more than two questions from any module. *PART C: Descriptive/Analytical/Problem solving questions 4 x 10 marks=40 marks* Two questions from each module with choice to answer one question. *Maximum Total Marks: 70*

PE09 304: Mechanics of Solids

Teaching scheme

3 hours lecture and 1 hour tutorial per week

Credits: 4

Objectives

- *To acquaint with the basic concepts of stress and deformation in solids.*
- *To practise the methodologies to analyse stresses and strains in simple structural members, and to apply the results in simple design problems.*

Module I (14 hours)

Simple Stress and Strain: Introduction to analysis of deformable bodies – internal forces – method of sections – assumptions and limitations. Simple stresses – stresses due to normal, shear and bearing loads – strength design of simple members. Axial and shear strains – Material behaviour – uniaxial tension test – stress-strain diagrams – concepts of orthotropy, anisotropy and inelastic behaviour – Hooke's law for linearly elastic isotropic material under axial and shear deformation – deformation in axially loaded bars – thermal effects – statically indeterminate structures – principle of superposition. Elastic strain energy for uniaxial stress. Definition of stress and strain at a point (introduction to stress and strain tensors and its components only) – Poisson's ratio – biaxial and triaxial deformations – Bulk modulus - Relations between elastic constants.

Module II (14 hours)

Torsion: Torsion theory of elastic circular bars – assumptions and limitations – polar modulus - torsional rigidity – economic cross-sections – statically indeterminate problems – design for torsional load (shaft and flanged bolt coupling) – torsion of inelastic circular bars (introduction only).

Axial force, shear force and bending moment: Diagrammatic conventions for supports and loading - axial force, shear force and bending moment in a beam – differential relations between load, shear force and bending moment - shear force and bending moment diagrams by direct and summation approach - use of singularity functions – elastic curve – point of inflection.

Module III (13 hours)

Stresses in beams: Pure bending – flexure formula for beams – assumptions and limitations – section modulus - flexural rigidity - economic sections – beam of uniform strength. Shearing stress formula for beams – assumptions and limitations - shear flow – design for flexure and shear (reinforced beams, flitched beams, etc.) – inelastic bending (introduction only). Deflection of beams: Moment-curvature relation – assumptions and limitations - double integration method - singularity functions – Macculays method – superposition techniques – moment area method and conjugate beam ideas for simple cases – elementary treatment of statically indeterminate beams.

Module IV (13 hours)

Transformation of stress and strains: Plane state of stress - equations of transformation - principal stresses. Plane state of strain – analogy between stress and strain transformation - Mohr's circles of stress and strain – strain rosettes.

Compound stresses: Combined axial, flexural and shear loads – eccentric loading under tension/compression - kern of a section (rectangular and circular section) - combined bending and twisting loads.

Theory of columns: Buckling theory –Euler's formula for long columns – assumptions and limitations – effect of end conditions - slenderness ratio – Rankine's formula for intermediate columns – Eccentric loading of columns – secant formula.

Text Books

2. I. H. Shames, *Introduction to Solid Mechanics*, Prentice Hall of India
3. F. Beer, E. R. Johnston, J. T. DeWolf, *Mechanics of Materials*, McGraw Hill
4. S. H. Crandal, N. C. Dhal, T. J. Lardner, *An Introduction to the Mechanics of Solids*, McGraw Hill

Internal Continuous Assessment (Maximum Marks-30)

60% - Tests (minimum 2)

30% - Assignments (minimum 2) such as home work, problem solving, etc.

10% - Regularity in the class

University Examination Pattern

PART A: Short answer questions (one/two sentences) 5 x 2 marks = 10 marks All questions are compulsory. There should be at least one question from each module and not more than two questions from any module. *PART B: Analytical/Problem solving questions 4 x 5 marks = 20 marks* Candidates have to answer four questions out of six. There should be at least one question from each module and not more than two questions from any module. *PART C: Descriptive/Analytical/Problem solving questions 4 x 10 marks = 40 marks* Two questions from each module with choice to answer one question. *Maximum Total Marks: 70*

PE09 305: Metallurgy and Material Science

Teaching scheme

3 hours lecture and 1 hour tutorial per week

Credits: 4

Objectives

- To provide basic knowledge in metallurgical aspects of material and its properties
- To give an exposure on materials and their structures
- To create general awareness regarding instruments and techniques used for material characterization

Module 1 (14 hours)

History of materials, Metallic Materials, Non metallic Materials, Composites- Structure of solids- Crystal Structure, Metallic crystal structures, Directions & Planes
Crystallization of pure metals- Nuclei Formation, Crystal growth, Grain size.
Crystal defects- Point defects, Line defects, planar defects

Module II (14 hours)

Alloys & phase diagrams- Solid solutions-Phase rule-Lever rule-Equilibrium Diagram of Binary system-Eutectic, Peritectic & Eutectoid reactions-Iron carbon diagrams

Module III (13 hours)

Heat treatment of steels- Isothermal transformation – TTT diagrams-CCT diagrams, Annealing Normalizing, Hardening, Tempering, Austempering, Martempering, Carburizing, Nitriding etc., Diffusion mechanisms, strengthening mechanisms

Module IV (13 hours)

Structure determination- study of microstructure, surface preparation-specimen preparation- Metallurgical microscope-Mechanical testing of materials-Hardness test, Impact test, Fatigue test, Creep test.

Text Books

1. R Sreenivasan, *Engineering materials & metallurgy*, Tata Mc GrawHill Publishers

References

1. William D. Callister, *Material Science and Engineering*, John Wiley and sons Inc
2. George.E.Diter, *Mechanical Metallurgy*, Mc Graw Hill
3. R.A.Higgins, *Engineering Metallurgy applied to physical Metallurgy*, VIVA (Low Priced)
4. Sir.Allan Cottrel, *An Introduction to Metallurgy*, University Press

Internal Continuous Assessment (Maximum Marks-30)

- 60% - Tests (minimum 2)
30% - Assignments (minimum 2) such as home work, problem solving, group discussions, quiz, literature survey, seminar, term-project, software exercises, ec.
10% - Regularity in the class

University Examination Pattern

PART A: Short answer questions (one/two sentences)

5 x 2 marks=10 marks

All questions are compulsory. There should be at least one question from each module and not more than two questions from any module.

PART B: Analytical/Problem solving questions

4 x 5 marks=20 marks

Candidates have to answer four questions out of six. There should be at least one question from each module and not more than two questions from any module.

PART C: Descriptive/Analytical/Problem solving questions

4 x 10 marks=40 marks

Two questions from each module with choice to answer one question.

Maximum Total Marks: 70

PE09 306: Machine Tool Technology

Teaching scheme

3 hours lecture and 1 hour tutorial per week

Credits: 4

Objectives

- To impart basic knowledge about different machine tools

Module I (14 hours)

Lathe - Different classifications - constructional features - driving mechanisms - tool and work holding devices - operations - speed, feed, depth of cut and machining time calculations – specifications - Capstan, turret and automatic lathes - constructional features - tool layout - tool and work holding devices – operations

Module II (14 hours)

Abrasives and abrasive tools - types of abrasives and their properties - manufacture of grinding wheels - types of bond, grit, grade, structure - nomenclature of a grinding wheel - selection of a grinding wheel, dressing truing and balancing of grinding wheels - Grinding machines - classification of grinding machines - constructional features - tool and work holding devices - operations - cylindrical, surface, centreless, thread, form, tool and cutter grinding – specifications - Surface finishing lapping, honing, super finishing -equipments - tolerance and finish, buffing - applications.

Module III (13 hours)

Milling, Drilling and boring machines - Classification - constructional features - driving mechanisms - tool and work holding devices - types of tools - operations – specifications - Gear generation methods - Gear shaping, gear hobbing, gear shaving, gear grinding, gear lapping - bevel gear generators

Module IV (13 hours)

Shaper, planer, slotter and broaching machines - Different types and their field of application - constructional features - driving mechanisms - tools used - tool and work holding devices - operations – specifications

Text Books

1. Hajra Choudhary, *Elements of workshop technology*, Vol. II, Media Promoters & Publications
2. Chapman *Workshop technology*, Vol. II, III, ELBS
3. P.N. Rao, *Manufacturing Technology-Volume II*, Tata McGraw Hill

Reference Books

Lindberg, *Processes and materials for manufacture*, Prentice Hall.
ASME Tool Engineering Handbook
H.M.T, *Production Technology*, Tata McGraw Hill

Internal Continuous Assessment (Maximum Marks-30)

- 60% - Tests (minimum 2)
30% - Assignments (minimum 2) such as home work, problem solving, group discussions, quiz, literature survey, seminar, term-project, software exercises, etc.
10% - Regularity in the class

University Examination Pattern

PART A: Short answer questions (one/two sentences)

5 x 2 marks=10 marks

All questions are compulsory. There should be at least one question from each module and not more than two questions from any module.

PART B: Analytical/Problem solving questions

4 x 5 marks=20 marks

Candidates have to answer four questions out of six. There should be at least one question from each module and not more than two questions from any module.

PART C: Descriptive/Analytical/Problem solving questions

4 x 10 marks=40 marks

Two questions from each module with choice to answer one question.

Maximum Total Marks: 70

PE09 307(P): Production Engineering Drawing

Teaching scheme

3 Hours drawing per week

Credits: 2

Objectives

- To impart the basic concepts of production drawing
- To develop understanding about how to draw a machine assembly
- To help the students how to translate design concepts to drawing

Module I (12 hours)

Sketching:-

Preparation of freehand, dimensioned sketches of the following. Hexagonal bolt and nut with washer - Square headed bolt - Common types of bolts- various types of nuts for locking - locking of bolt head - foundation bolts - various types of screw heads - studs - various types of keys - pipe joints and fittings

Module II (12 hours)

Joints: cotter, knuckle, spigot and socket, flanged coupling, and universal coupling, muff coupling. Preparation of drawings

Bearings. : Footstep - Plummer block, swivel, self-aligning ball bearing, and stuffing box.

Valves - simple stop valve and non-return valve.

Module III (12 hours)

Production machines and jigs.

Lathe tailstock, chuck, tool post, bench vice and machine swivel vices, and jigs for milling and drilling, drill holder.

Text Books

1. P.S.Gill, *Text Book of Machine drawing*, S.K. Kataria Pub.
2. P .I. Varghese, *Machine Drawing*, VIP Publishers, Thrissur
3. K .C John, *Machine Drawing*, Jet Publications, Thrissur

Reference Books

1. N.D.Bhatt, *Machine drawing*, Charotra Pub.
2. Laxmi narayana, *Machine drawing*,
3. N.Sidheswar, *Machine drawing*, Tata McGraw Hill

Internal Continuous Assessment (Maximum Marks-50)

- 60%- Minimum of 3 sheets from Module I, 4 sheets from Module II and III
- 30%- Test/s
- 10%- Regularity in the class

University Examination Pattern

PART A: Short answer questions (one/two sentences)

5 x 2 marks=10 marks

All questions are compulsory. There should be at least one question from each module and not more than two questions from any module.

PART B: Analytical/Problem solving questions

4 x 5 marks=20 marks

Candidates have to answer four questions out of six. There should be at least one question from each module and not more than two questions from any module.

PART C: Descriptive/Analytical/Problem solving questions

4 x 10 marks=40 marks

Two questions from each module with choice to answer one question.

Maximum Total Marks: 70

PE09 308: Machine Tool Lab-I

Teaching scheme

3 hours practical per week

Credits: 2

Objectives

- To develop the machining skills
 - To have clear understanding of working of machine tools
 - To have an idea about the difficulty and work content in machining operations
1. Study of different types of lathes - machine specifications - process capability – centre – capstan - turret and automatic lathes and their accessories – chucks – faceplate - steady rest - follower rest - tool post -centre collets
 2. Selection of cutting parameters - speed, feed and depth of cut based on work - tool combination - coolant types.
 3. Exercise on plain - step, taper turning and eccentric turning.
 4. Screw cutting - external threads – multi start thread cutting.
 5. Inspection and measuring of machined lathe components using vernier caliper – micrometer - thread plug and ring gauges - dial indicators and surface finish measuring instruments.
 6. Turret lathe and copying lathe operation/ demonstration.

Internal Continuous Assessment (*Maximum Marks-50*)

60%-Laboratory practical and record

30%- Test/s

10%- Regularity in the class

Semester End Examination (*Maximum Marks-50*)

70% - Procedure, conducting experiment, results, tabulation, and inference

20% - Viva voce

10% - Fair record

EN09 401 A ENGINEERING MATHEMATICS IV (Common for Mechanical, Civil, Production, Chemical, IT)

Teaching scheme

3 hours lecture and 1 hour tutorial per week

Credits: 4

Module I (14 hours)

Probability Distributions - Random variables – Mean and Variance of probability distributions – Binomial Distribution – Poisson Distribution – Poisson approximation to Binomial distribution – hyper Geometric Distribution – Geometric Distribution – Probability densities – Normal Distribution – Uniform Distribution – Gamma Distribution.

Module II (14 hours)

Theory of Inference - Population and Samples – Sampling Distribution – Sampling distribution of Mean and Variance – Interval Estimation – Confidence interval for Mean and Variance – Testing of Hypotheses – Hypotheses concerning one mean – Hypotheses concerning two means – hypotheses concerning one variance – Hypotheses concerning two variances – Test of Goodness of fit.

Module III (13hours)

Series Solutions of Differential Equations - Power series method for solving ordinary differential equations – Legendre's equation – Legendre polynomials – Rodrigue's formula – Generating functions – Relation between Legendre polynomials – Orthogonality property of Legendre polynomials (Proof not required) – Frobenius method for solving ordinary differential equations – Bessel's equation – Bessel functions – Generating functions – Relation between Bessel functions – Orthogonality property of Bessel functions (Proof not required).

Module IV (13 hours)

Partial Differential Equations – Introduction – Solutions of equations of the form $F(p,q) = 0$; $F(x,p,q) = 0$; $F(y,p,q) = 0$; $F(z,p,q) = 0$; $F_1(x,q) = F_2(y,q)$; Clairaut's form, $z = px + qv + F(p,q)$; Legrange's form, $Pp + Qq = R$ – Classification of Linear PDE's – Derivation of one dimensional wave equation and one dimensional heat equation – Solution of these equation by the method of separation of variables – D'Alembert's solution of one dimensional wave equation.

Text Books

1. Ervin Kreyszig, *Advanced Engineering Mathematics* (8th Edition) John Wiley & Sons

Reference Books

1. C.R.Wiley & L.C.Barrett, *Advanced Engineering Mathematics* (Sixth Edition), Mc-Graw Hill
2. Churchil R.V. Brown J W & Verhey R F, *Complex variables and Applicaions*, Mc-Graw Hill
3. Pipes L.A. & Harvill L.R., *Applied mathematics for Engineers and Physicists*, Mc-Graw Hill

Internal Continuous Assessment (Maximum Marks-30)

- 60% - Tests (minimum 2)
- 30% - Assignments (minimum 2) such as home work, problem solving, group discussions, quiz, literature survey, seminar, term-project, software exercises, etc.
- 10% - Regularity in the class

University Examination Pattern

PART A: Short answer questions (one/two sentences)

5 x 2 marks=10 marks

All questions are compulsory. There should be at least one question from each module and not more than two questions from any module.

PART B: Analytical/Problem solving questions

4 x 5 marks=20 marks

Candidates have to answer four questions out of six. There should be at least one question from each module and not more than two questions from any module.

PART C: Descriptive/Analytical/Problem solving questions

4 x 10 marks=40 marks

Two questions from each module with choice to answer one question.

Maximum Total Marks: 70

EN09 402: Environmental Science

(Common for all branches)

Teaching scheme

2 hours lecture and 1 hour tutorial per week

Credits: 3

Objectives

- *To understand the problems of pollution, loss of forest, solid waste disposal, degradation of environment, loss of biodiversity and other environmental issues and create awareness among the students to address these issues and conserve the environment in a better way.*

Module I (8 hours)

The Multidisciplinary nature of environmental science, Definition-scope and importance-need for public awareness. Natural resources, Renewable and non-renewable resources:

Natural resources and associated problems-forest resources: Use and over exploitation, deforestation, case studies. Timber extraction, mining, dams and their defects on forests and tribal people.- water resources: Use and over utilization of surface and ground water, floods ,drought ,conflicts over water, dams-benefits and problems.- Mineral resources: Use and exploitation,environmental effects of extracting and using mineral resources, case studies.- Food resources: World food problems, changes caused by agriculture over grazing, effects of modern agriculture, fertilizer-pesticide problems, water logging,salinity,case studies.-Energy resources: Growing energy needs, renewable and non-renewable energy resources, use of alternate energy resources, Land resources: Land as a resource, land

degradation, man induced land slides, soil erosion and desertification.

Module II (8 hours)

Ecosystems-Concept of an ecosystem-structure and function of an ecosystem – producers, consumers, decomposers-energy flow in the ecosystem-Ecological succession- Food chains, food webs and Ecological pyramids-Introduction, types, characteristics features, structure and function of the following ecosystem-Forest ecosystem- Grassland ecosystem –Desert ecosystem-Aquatic ecosystem(ponds, streams, lakes, rivers, oceans , estuaries)

Biodiversity and its consideration

Introduction- Definition: genetic , species and ecosystem diversity-Biogeographical; classification of India –value of biodiversity: consumptive use, productive use, social ethical , aesthetic and option values Biodiversity at Global, national , and local level-India at mega – diversity nation- Hot spot of biodiversity-Threats to biodiversity: habitat loss, poaching of wild life, man , wild life conflicts –Endangered and endemic species of India-Conservation of biodiversity : In-situ and Ex-situ conservation of biodiversity.

Module III (10 hours)

Environmental pollution

Definition-Causes, effects and control measures of Air pollution-m Water pollution –soil pollution-Marine pollution-Noise pollution-Thermal pollution-Nuclear hazards-Solid waste management: Causes, effects and control measures of urban and industrial wastes-Role of an individual in prevention of pollution-pollution case studies-Disaster management: floods, earth quake, cyclone and landslides-Environmental impact assessment

Module IV (10 hours)

Environment and sustainable development-Sustainable use of natural resources-Conversion of renewable energy resources into other forms-case studies-Problems related to energy and Energy auditing-Water conservation, rain water harvesting, water shed management-case studies-Climate change, global warming, acid rain, ozone layer depletion, nuclear accidents and holocaust-Waste land reclamation-Consumerism and waste products-Reduce, reuse and recycling of products-Value education.

Internal Continuous Assessment (Maximum Marks-30)

60% - Tests (minimum 2)

30% - Assignments (minimum 2) such as Report of field work, literature survey, seminar etc.

10% - Regularity in the class

Note: Field work can be Visit to a local area to document environmental assets-river/forest/grass land/mountain or Visit to local polluted site-urban/rural/industrial/agricultural etc. or Study of common plants, insects, birds etc. or Study of simple ecosystems-pond, river, hill slopes etc. or mini project work on renewable energy and other natural resources, management of wastes etc.

University Examination Pattern

PART A: Short answer questions (one/two sentences) 5 x 2 marks = 10 marks

All questions are compulsory. There should be at least one question from each module and not more than two questions from any module.

PART B: Analytical/Problem solving questions 4 x 5 marks = 20 marks

Candidates have to answer four questions out of six. There should be at least one question from each module and not more than two questions from any module.

PART C: Descriptive/Analytical/Problem solving questions 4 x 10 marks = 40 marks

Two questions from each module with choice to answer one question.

Maximum Total Marks: 70

PE09 403: Theory of Machines

Teaching scheme

4 hours lecture and 1 hour tutorial per week

Credits: 5

Objectives

- The student shall learn to conduct the kinematic analysis of machinery
- The paper exposes the student to various kinds of mechanisms used in machines
- This paper should serve as a primer for learning dynamic analysis of machinery

Module I (18 hours)

Introduction- definition and explanations of link - kinematic pair - mechanism and machine - Kinematic chains – classification - Inversions of four bar - single slider and double slider crank chains - Slotted lever and Whitworth quick return mechanisms – Mechanisms :- Pantograph - Exact and approximate straight-line mechanisms.

Kinematics - Velocity and acceleration in mechanisms - graphical solution - Corioli's component of acceleration – instantaneous centres – Kennedy's theorem – velocity analysis using instantaneous centres

Module II (18 hours)

Toothed gearing - Law of gearing - Cycloidal and involute profiles - gear terminology and standard proportions - length of arc of contact - path of contact and contact ratio - Interference and number of teeth to avoid interference - Gear trains - simple, compound, epicyclic and reverted gear trains - Gear ratio calculations.

Module III (18 hours)

Cams - classification of cams and followers - graphical determination of profiles for different followers and different types of motion

Belt and rope drives – open and crossed belt drives- velocity ratio- length of belt-ratio of centres- power transmitted – centrifugal tension – initial tension and creep

Module IV (18 hours)

Vibration - kinematics of vibratory motion - vibration systems - vibration systems having single degree of freedom - undamped free vibration - forced vibration without damping - transverse vibrations of shafts - Dunkerly's method - energy method - critical or whirling speeds - torsional vibrations.

Balancing – Static and dynamic balancing – balancing of several masses in a plane - balancing of masses rotating in several transverse planes- balancing machines.

3. R K Bansal, *Theory of Machines*, Dhanpat Rai Publications Reference Books

Internal Continuous Assessment (Maximum Marks-30)

60% - Tests (minimum 2)

30% - Assignments (minimum 2) such as home work, problem solving, group discussions, quiz, literature survey, seminar, term-project, software exercises, etc.

10% - Regularity in the class

University Examination Pattern

PART A: Short answer questions (one/two sentences) 5 x 2 marks=10 marks

All questions are compulsory. There should be at least one question from each module and not more than two questions from any module.

PART B: Analytical/Problem solving questions 4 x 5 marks=20 marks

Candidates have to answer four questions out of six. There should be at least one question from each module and not more than two questions from any module.

PART C: Descriptive/Analytical/Problem solving questions 4 x 10 marks=40 marks

Two questions from each module with choice to answer one question.

Maximum Total Marks: 70

PE09 404: Fluid Mechanics and Machinery

Teaching scheme

3 hours lecture and 1 hour tutorial per week

Credits: 4

Objectives

- To develop understanding about the basic principles, concepts, mathematical and analytical tools of Fluid Mechanics.
- To develop understanding about the construction, working principle and characteristics of Hydraulic Machines.

Module I (14 hours)

Definitions and properties of fluids: – Density, gas laws, equations of state, viscosity, vapour pressure, compressibility, surface tension and capillarity etc.

Fluid pressure and its measurement: - intensity of pressure, Pascal's law, Variation of pressure in static fluid:- compressible and incompressible fluids, pressure head – manometers

Fluid statics: - hydrostatic forces on submerged surfaces, buoyancy and floatation, Archimedes principle, metacentre, stability of submerged and floating bodies.

Module II (14 hours)

Types of flow – stream line, path line, streak line-continuity equation- Bernoulli's theorem for the flow of incompressible fluids-

Flow through pipes – laminar and turbulent flow- critical Reynolds number- Hagen Poiseuille Law, development of boundary layer in pipes-pipe losses

Fluid flow measurements: - pitot tube, venturimeter, orifice meter, nozzle meter

Module III (13 hours)

Dimensional analysis - Physical dimensions - dimensional homogeneity - Buckingham's theorem - geometric, kinematic and dynamic similarities - theory of models

Pumps :- reciprocating pumps - principle of working, work done, effect of acceleration, frictional resistance, separation, air vessel etc.

Hydraulic devices - Hydraulic ram, accumulators, and intensifier - principles of working, gear pumps

Module IV (13 hours)

Impact of jets: - force exerted by fluid jet on (i) stationary curved vane (ii) moving curved vane.

Turbines - classification - reaction and impulse turbines - Pelton wheel, Francis, Kaplan, turbines etc.

Centrifugal pumps - work done by the impeller, - head and efficiency - specific speed - testing of pumps. (Simple problems)

Text Books

1. Modi P.N., Seth S.M, *Hydraulics and Fluid Mechanics*, Standard Book House.
2. D S Kumar, *Fluid Mechanics and Fluid Power Engineering*, S K Kataria & Sons Pub.

Reference Books

2. Massey - *Mechanics of fluids*, -ELBS
3. Dr.Jagdish Lal. - *Hydraulic machinery*, Metropolitan book House Co.
4. Kumar K.L., *Engineering Fluid Mechanics*, Eurasia Publications Limited, NewDelhi

Internal Continuous Assessment (*Maximum Marks-30*)

60% - Tests (minimum 2)

30% - Assignments (minimum 2) such as home work, problem solving, group discussions, quiz, literature survey, seminar, term-project, software exercises, etc.

10% - Regularity in the class

University Examination Pattern

PART A: Short answer questions (one/two sentences)

5 x 2 marks=10 marks

All questions are compulsory. There should be at least one question from each module and not more than two questions from any module.

PART B: Analytical/Problem solving questions

4 x 5 marks=20 marks

Candidates have to answer four questions out of six. There should be at least one question from each module and not more than two questions from any module.

PART C: Descriptive/Analytical/Problem solving questions

4 x 10 marks=40 marks

Two questions from each module with choice to answer one question.

Maximum Total Marks: 70

PE09 405: Design of Machine Elements

Teaching scheme

3 hours lecture and 1 hour tutorial per week

Credits: 4

Objectives

- To acquaint the students with the analytical and mathematical tools of mechanical design.
- To familiarise the students with practical consideration used for the design and selection of the machine components

Module I (14 hours)

Principles of mechanical design - estimation of design load - design for steady, fluctuating and dynamic stresses - effects of stress concentration - consideration of creep and thermal stresses in design - influence of production processes in design - tolerances and fits per I.S specifications - principles of standardization - selection of materials - considerations like wear environment - human and aesthetic aspects.

Module II (14 hours)

Welded joints - stresses welded joints - strength of welded joints - fatigue loading of welded joints - design of bolts and screws.

Module III (16 hours)

Mechanical springs - design of helical springs - helical torsion spring - critical frequency of helical springs - energy storage capacity - common types of leaf springs - shafts - stresses in shafts - equivalent twisting and bending moments - effect of keyways - transmission shafts - determination of shaft size for strength - design of shafts for deflection - critical speeds for shafts - operating speeds - shafts subjected to steady and alternating loads.

Module IV (10 hours)

Couplings - rigid and flexible coupling - common types of keys, pins and retainers and their applications

The following data books may be permitted for the examination

1. Prof. Narayana Iyengar & Prof. Lingiah, *Design Data book Vol 1 & 2*
2. *Design Data book of PSG College of Technology*

Text Books

1. Bhandari V.B., *Design of Machine Elements*, Tata McGraw Hill publishers
2. Shigly J.E., *Mechanical Engineering Design*, McGraw Hill, International student edition

Reference Books

PART B: Analytical/Problem solving questions 4 x 5 marks=20 marks

Candidates have to answer four questions out of six. There should be at least one question from each module and not more than two questions from any module.

PART C: Descriptive/Analytical/Problem solving questions 4 x 10 marks=40 marks

Two questions from each module with choice to answer one question.

Maximum Total Marks: 70

PE09 406: Thermal Engineering

Teaching scheme

3 hours lecture and 1 hour tutorial per week

Credits: 4

Objectives

- To acquaint the students with the fundamental concepts of Thermodynamics and Heat Transfer
- To equip the students to analyse and interpret various thermodynamic cycles and heat energy transfer systems

Module I (14hours)

Introduction concept of thermodynamic property and state – intensive and extensive properties – control volume approach – laws of thermodynamics – zero'th law and temperature – energy transfer as work – first law of thermodynamics and internal energy — second law of thermodynamics – reversibility and availability – entropy as a property – enthalpy – absolute entropy and third law of thermodynamics (problems of elementary nature)

Module II (14 hours)

Working substance and their properties – property charts and tables – representation of changes of state and process on T-S, H-S and P-h charts – characteristics of thermodynamic systems – ideal and practical cycles – air cycle – Carnot, Otto, Diesel and Brayton cycles – theoretical efficiencies – Rankine cycle and it's modifications – calculation of output and efficiencies – reversed heat engine cycle – refrigerating effect and COP (problems of elementary nature).

Module III (13 hours)

Compressors and refrigeration systems - air compressors - reciprocating and rotary compressors - principle of operation of compressors – refrigeration - vapor compression and absorption systems - principle of operation of refrigeration systems (problems of elementary nature)

Module IV (13 hours)

Text Books

1. P.K.Nag, *Engineering Thermodynamics*, Tata Mc Graw-Hill

Reference Books

M. Achuthan, *Engineering Thermodynamics, PHI*

J.P Holman, *Heat transfer*, Tata Mc Graw-Hill

Ballaney, *Thermal Engineering*, Khanna Publishers

4 x 5 marks=20 marks

Candidates have to answer four questions out of six. There should be at least one question from each module and not more than two questions from any module.

PART C: Descriptive/Analytical/Problem solving questions

4 x 10 marks=40 marks

Two questions from each module with choice to answer one question.

Maximum Total Marks: 70

PE09 407(P): Electrical and Electronics Lab

Teaching scheme

3 hours laboratory classes per week

Credits: 2

Objectives

- *The lab provides an opportunity to understand the basic electrical theories by conducting experiments. This will also provide them with sufficient experience in designing experiments to demonstrate or validate electrical theory.*
1. Study of starters (i) 3 point and 4 point starters for DC motors (ii) Star-delta, auto-transformer, DOL and rotor resistance starters for induction motors.
 2. (a)(i) Obtain the Open Circuit Characteristics of the DC shunt generator at the rated speed and determine the shunt field critical resistance. (ii) Pre-determine the OCC at the given speed (b) Perform load test on the given DC shunt generator and plot the external characteristics.
 3. Perform Break test on DC shunt and series motors and plot the following characteristics (i) output v/s efficiency (ii)) output v/s line current (iii) speed v/s torque (iv) line current v/s torque.
 4. (a) Perform OC and SC test on single phase transformer and pre-determine the following (i) equivalent circuit (ii) efficiency (iii) regulation.
(b) Perform load test on single phase transformer and determine efficiency and regulation.
 5. Perform load test on three phase cage induction motor and plot the following Characteristics (i) efficiency v/s output (ii) slip v/s output (iii) power factor v/s output (iv) torque v/s output.
 6. Calibrate the given single phase energy meter by (i) direct loading (ii) Phantom loading.
 7. (i) Familiarization with electronic components, devices and equipments (ii) Study of CRO.
 8. Set up full-wave bridge rectifier circuit with and without capacitor filter. Observe the input and output waveforms. Calculate ripple factor and regulation.
 9. Design and set up following OP-Amp circuits (i) inverting and non-inverting amplifier (ii) Adder (iii) subtractor (iv) differentiator (V) integrator (vi) comparator
 10. Design and set up half adder and full adder circuit.
 11. Design and set up astable multivibrator using 555 timer.
 12. Design and set up asynchronous counter using J-K flip flop.
 13. Study the given 8085 microprocessor kit. Write and execute an assembly language program to add N numbers.
 14. (i) Study the SCR converter circuit (ii) Control the speed of the given DC motor.

Internal Continuous Assessment (*Maximum Marks-50*)

60%-Laboratory practical and record
30%- Test/s
10%- Regularity in the class

Semester End Examination (*Maximum Marks-50*)

70% - Procedure, conducting experiment, results, tabulation, and inference
20% - Viva voce
10% - Fair record

PE09 408(P): Mechanical Engineering Lab

Teaching scheme

3 hours Practical per week

Credits: 2

Objectives

- *To plan and conduct experiments to study and validate the performance of various measuring instruments and equipment*
- *To train the students to plan experiments for evaluating practical situations*
- *To understand how experiments shall be set up for experimental studies*

1. Estimation of hydraulic coefficients of orifices and mouth pieces
2. Calibration of venturimeter, orifice meter and flow nozzle meter
3. Calibration of triangular and rectangular notches
4. Performance test on rotodynamic and reciprocating pumps
5. Performance test on two stroke and four stroke petrol and diesel engine
6. Calibration of pressure gauge
7. Calibration and use of temperature sensing devices – thermo couple, resistance thermo meters and pyrometers
8. Calibration and use of vibration pickups, displacement pickups and accelerometers

Internal Continuous Assessment (*Maximum Marks-50*)

60%-Laboratory practical and record
30%- Test/s
10%- Regularity in the class

Semester End Examination (*Maximum Marks-50*)

70% - Procedure, conducting experiment, results, tabulation, and inference
20% - Viva voce
10% - Fair record

PE 09 501: Industrial Automation

Teaching scheme

4 hours lecture and 1 hour tutorial per week

Credits: 5

Objectives

- To impart the concept of Automation, hardware generally used logics related to Automation

Module I (18 hours)

Fundamental concepts in manufacturing automation –Definition – reasons-types of production, types of automation strategies, levels, automated flow line, work piece transport, transfer mechanisms, buffer storages, part feeders

Module II (18 hours)

Low cost automation, use of hydraulics and pneumatics in automation, fluids selection and study of hydraulic components and hydraulic power pack, counter devices and other elements – Simple sequential logical circuits design for single – multi cylinders, fluidic elements and programmable logic controllers – electro pneumatic circuits – simple circuit design

Module III (18 hours)

Computer Numerical control, advantages, open and closed loop control, classification of CNC machine tools, structural features-turning and machining centers, Automatic tool changers, pallet changer and NC Tooling, CNC drives.

Module IV (18 hours)

Manual and computer aided part programming, canned cycles, APT. Introduction into CNC, Flexible manufacturing system, robotics and computer aided quality control, CMM, automated inspection and computer integrated manufacturing.

Reference books

1. Mikell P Groover, *Automation, Production systems and computer aided manufacturing*, Prentice Hall, 1980
2. Radhakrishnan P. *Computer numerical controlled machines*
3. Kundra & Thiwari, *NC Machine Tools and computer aided manufacturing*, TMH 1991

Internal Continuous Assessment (Maximum Marks-30)

- 60% - Tests (minimum 2)
30% - Assignments (minimum 2) such as home work, problem solving, group discussions, quiz, literature survey, seminar, term-project, software exercises, etc.
10% - Regularity in the class

University Examination Pattern

PART A: Short answer questions (one/two sentences) 5 x 2 marks=10 marks

All questions are compulsory. There should be at least one question from each module and not more than two questions from any module.

PART B: Analytical/Problem solving questions 4 x 5 marks=20 marks

Candidates have to answer four questions out of six. There should be at least one question from each module and not more than two questions from any module.

PART C: Descriptive/Analytical/Problem solving questions 4 x 10 marks=40 marks

Two questions from each module with choice to answer one question.

Maximum Total Marks: 70

PE09 502: Computational Methods in Engineering

Teaching scheme

3 hours lecture and 1 hour tutorial per week

Credits: 4

Objectives

- To develop analytical capabilities
- To formulate and solve real engineering situation

Module I (14 hours)

Errors in numerical calculations - sources of errors - significant digits - numerical solutions of polynomial and transcendental equations - bisection method - Regula-Falsi method - Newton-Raphson Method - method of iteration - rates of convergence of Newton-Raphson Method - Graeffe's root squaring method for polynomial equations - Bairstow's method for extracting quadratic factors in the case of polynomial equations - Newton's method for non-linear simultaneous equations

Module II (14 hours)

Solutions of system of linear algebraic equations - Gauss elimination methods - Crout's triangularization methods - Gauss - seidel iteration method - relaxation methods - power method for the determination of Eigen values - polynomial interpolation - Lagrange's interpolation polynomial - divided differences - Newton's divided differences interpolation polynomial - finite differences - Gregory - Newton - forward and backward differences interpolation formula (elementary treatment only)

Module III (13 hours)

Numerical differentiation - differentiation formulas in the case of equally spaced points - numerical integration - trapezoidal and Simpson's rule - errors of interpolation and integration formulas - 2 points and 3 points Gauss Legendre and Gauss-Chebyshev quadratic formulas - numerical solution of ordinary differential equations - single step methods Taylor series methods - Euler's method - modified Euler's method - Picards iteration method - Runge-Kuta methods - 4th order formulae - multi-step methods - Milne's predictor-corrector formula

4 x 10 marks=40 marks

Two questions from each module with choice to answer one question.

Maximum Total Marks: 70

PE09 503: Welding and Allied Processes

Teaching scheme

3 hours lecture and 1 hour tutorial per week

Credits: 4

Objectives

- To understand different joining techniques, metallurgical aspects of welding, testing and quality control of weldments

Module I (14 hours)

Introduction - classification of processes –soldering, brazing, welding, gouging, arc and gas cutting

Welding symbols -joints -terminology - weldability of materials- distortion - residual stresses -and welding metallurgy.

Module II (14 Hours)

Gas and arc welding processes, equipment, electrodes, power source etc. of carbon arc, shielded metal arc, TIG, MIG, submerged, electro slag, plasma arc, stud and EBM - applications.

Module III (13 Hours)

Resistance and other welding processes - resistance welding - spot, seam, projection, resistance butt, percussion, Thermit, laser beam, forge, friction and explosion welding.

Module IV (13 Hours)

Defects in welds - inspection and testing of welds - destructive and non destructive testing - visual, radiography, magnetic particle, eddy current and dye penetrant testing.

PE09 504: Metal Casting

Teaching scheme

3 hours lecture and 1 hour tutorial per week

Credits: 4

Objectives

- To acquaint the student with the fundamental aspects related to metal casting viz. melting solidification, pattern making, sand casting and special casting process

Module 1 (14 hours)

Melting - Melting and Pouring of Metals - Crucible, Cupola, Oil Fired Furnaces – Electrical Furnaces – Induction Furnaces - Arc Fired Furnaces - Calculation of Cupola Charges - Temperature Control and Measurements in Furnaces - Degasification of Metals - Inoculation.

Module II (14 Hours)

Solidification - Freezing of Metals and Alloys - Properties Related to Freezing Mechanisms - Effect of Composition and Rate of Cooling on The Structure of Cast Iron - Metallurgical advantages of Casting - Metallurgy of Non-Ferrous Casting Alloys.

Module III (13 Hours)

Moulding: Pattern Making, Moulding Methods - Processes, Materials and Equipments, Cores and Core Making - Moulding Sands - Properties, Control and Testing, Casting Design - Pouring and Feeding of Castings - Simple Examples of Riser Design for Steel Castings.

Module IV (13 Hours)

Sand Casting, Pressure Die Casting, Centrifugal Casting, Investment Casting, Shell Moulding, Carbon Dioxide Process, Continuous Casting etc. - Quality Control In Castings - Inspection and Testing in Castings - Salvaging - Mechanization of Foundries - Material Handling Equipments used in Foundry - Introduction to Casting of Non-Ferrous Metals like Aluminium, Copper etc. - Introduction to Steel Castings.

Text Book

1. Heine, Loper and Rosenthal - *Principles of Metal Casting*, Tata Mcgraw Hill.

Reference Books

1. Wulf, Taylor and Flemings - *Foundry Engineering*, Wiley Eastern
2. Howard - *Modern Foundry Practice*, Asia Pub.
3. Ekey and Winter - *Foundry Technology*, Mcgraw Hill
4. Dhanpatrai and M.Lal. - *A Textbook of Foundry Technology*.

5. Serope Kalpakjian Steve.R.Schmid, *Manufacturing Process for Engineering Materials*, Pearson Education
6. P N Rao, *Manufacturing Technology*, Vol I, Tata Mc Graw Hill Publishers

Internal continuous assessment (maximum marks-30)

60% - tests (minimum 2)

30% - assignments (minimum 2) such as home work, problem solving, group discussions, quiz, literature survey, seminar, term-project, software exercises, etc.

10% - regularity in the class

University Examination Pattern

PART A: Short answer questions (one/two sentences)

5 x 2 marks=10 marks

All questions are compulsory. There should be at least one question from each module and not more than two questions from any module.

PART B: Analytical/Problem solving questions

4 x 5 marks=20 marks

Candidates have to answer four questions out of six. There should be at least one question from each module and not more than two questions from any module.

PART C: Descriptive/Analytical/Problem solving questions

4 x 10 marks=40 marks

Two questions from each module with choice to answer one question.

Maximum Total Marks: 70

PE09 505: Machining of Materials

Teaching scheme

3 hours lecture and 1 hour tutorial per week

Credits: 4

Objectives

- To give the student basic concepts, processes and analysis of machining processes

Module I (14 hours)

History and development of tool materials - general requirements of tool materials-tool geometry-systems of cutting tool nomenclature- single point and multipoint tools- different machining processes and selection of tools. - Simple problems.

Module II (14 hours)

Mechanics of metal cutting- mechanism of chip formation – forces on cutting tool- Merchant's circle – tool dynamometers- tool force measurements- friction in metal cutting. - Simple problems.

Module III (13 hours)

Temperature in machining – temperature distribution - effect of machining variables on temperature – measurement of temperature.

Tool life and tool wear – effect of machining parameters on tool wear- selection, properties and application of cutting fluids. Simple problems.

Module IV (13 hours)

Economics of machining – choice of parameters – metal removal rates.

advanced machining processes – introduction – operating principles – process parameters and application of USM,AJM,WJM,ECM,ECG,EDM,EBM,LBM,PAM and chemical milling.

Text Books

1. Shaw M.C., *Metal cutting principles*, Oxford university press.

Reference books

1. Geoffrey Boothroyd, *Fundamentals of metal machining and machine tools.*, Tata Mc Graw hill
2. Sen and Bhattacharya, *Principles of metal cutting*, New central publishers.

3. Venkatesh and Chandrasekharan, *Experimental technics in metal cutting.*, Prentice hall India.
4. G R Nagpal, *Tool Engineering & Design*, Khanna Publishers
5. P N Rao, *Manufacturing Technolgoy, Vol II*, Tata McGraw Hill Publishers

Internal Continuous Assessment (*Maximum Marks-30*)

- 60% - Tests (minimum 2)
- 30% - Assignments (minimum 2) such as home work, problem solving, group discussions, quiz, literature survey, seminar, term-project, software exercises, etc.
- 10% - Regularity in the class

Candidates have to answer four questions out of six. There should be at least one question from each module and not more than two questions from any module.

PART C: Descriptive/Analytical/Problem solving questions 4 x 10 marks=40 marks

Two questions from each module with choice to answer one question.

Maximum Total Marks: 70

PE 09 506: Engineering Economics & Principles of Management

Teaching scheme

3 hours lecture per week

Credits: 3

Objectives

- *To have a basic knowledge on economic theories, and their applications, management concepts, functions of management, human behaviour at work etc.*

Module I (9 hours)

Basic Economics – Economic reasoning, Fundamental economic problems, Circular Flow in an economy, Law of supply and demand, Demand forecasting, Concepts of elasticity, Economic efficiency. Money and Banking. Inflation and deflation: concepts and regulatory measures. Economic Policy Reforms in India since 1991: Industrial policy, Foreign Trade policy, Monetary and fiscal policy, Impact on Industry.

Module II (9 hours)

Factors of production, Concepts of Total product, average product, Marginal product. Concept of Productivity and its measurement, Laws of returns, Input-output analysis, Production function analysis (Cobb-Douglas and CES), Internal and external economies of scale Analysis of costs, Accounting and economic costs, Total/Average/Marginal costs, Sunk cost, Private and Social cost, Opportunity cost. Characteristic features of Perfect competition, Monopolistic competition and Monopoly.

Module III (9 hours)

Introduction to Management – definition – Principles – Philosophy and development of management thought – Functions of management – Planning - Organizing – staffing – leading – controlling – Different types of Organizational structures and relationships - Decision making – Types of Decisions – Decision making under uncertainties, risk and certainty – criteria.

Module IV (9 hours)

Human behaviour and management - skills of manager at various levels in an organisation-

Human relations – Leadership and management – theories of leadership – leadership functions and qualities – Motivation and behaviour – Theories of Maslow, McGregor, Herzberg and McClelland – Management by Objectives and Exception.

Text Books

1. PaneerSelvam, R, *Engineering Economics*, Prentice Hall of India, New Delhi, 2002.
2. Koontz & Weirich, *Management*, McGraw-Hill Publishers.

Reference Books

1. Koutsoyiannis A, *Modern Micro economics*, McMillan, 2004
2. Barthwal, R.R *Industrial Economics*, Himalaya publishers, Mumbai, 2005.
3. Vohra, *Quantitative techniques in management*, McGraw hill Publishers.
4. Hersey Paul and Blanchard, *Management of Organisational behaviour*, Prentice Hall.
5. Luthans, *Organisational Behaviour*, Mc Graw Hill Publishers.
6. Jit S Chandran, *Organisational Behaviour*, Vikas Publishing.

Internal Continuous Assessment (Maximum Marks-30)

60% - Tests (minimum 2)

30% - Assignments (minimum 2) such as home work, problem solving, group discussions, quiz, literature survey, seminar, term-project, software exercises, etc.

10% - Regularity in the class

University Examination Pattern

PART B: Analytical/Problem solving questions 4 x 5 marks=20 marks

Candidates have to answer four questions out of six. There should be at least one question from each module and not more than two questions from any module.

PART C: Descriptive/Analytical/Problem solving questions 4 x 10 marks=40 marks

Two questions from each module with choice to answer one question.

Maximum Total Marks: 70

PE09 507(P): Machine Tool Lab II

Teaching scheme

3 hours laboratory classes per week

Credits: 2

Objectives

- *To understand the operation of equipment*
- *To evaluate and calibrate various equipment*
- *To understand how experiments shall be set up for experimental studies*

Module I

Shaping, planing and slotting:- working principles of crank shapers - hydraulic shaper - speeds and feeds in shaping - planing operations - shaper and planer tools - types of planers and their relative merits - Differences between vertical shaper and slotter- description of slotting machines and types of work done.

Exercises - Shaping and planing, surfacing, T- slots, grooving, dove tail cutting and keyways in flat and cylindrical surfaces. Slotting: - Keyway cutting and grooving.

Module II

Milling:- types of milling machines - principles of milling - milling machine attachments - speeds and feeds in milling operations - grooves, splines, dove tail and cam milling, climb and conventional milling, string and gang milling.

Exercises - indexing head, simple and differential indexing, plain milling, cutting of spur and helical gears.

Module III

Grinding and Drilling:- Types of grinding machines, surfaces, cylindrical, universal, selection of grinding wheels, - tool and cutter grinders – live and dead centre grinding – taper grinding.

Drill geometry – drilling - boring and reaming – types of drilling machines

Exercises –demonstration of cylindrical and taper grinding operations and drilling operation.

[Note: - At least four models to be prepared]

Internal Continuous Assessment (*Maximum Marks-50*)

60%-Laboratory practical and record
30%- Test/s
10%- Regularity in the class

Semester End Examination (*Maximum Marks-50*)

70% - Procedure, conducting experiment, results, tabulation, and inference
20% - Viva voce
10% - Fair record

PE09 508(P): Material Testing Lab

Teaching scheme

3 hours laboratory classes per week

Credits: 2

Objectives

- *To provide the Students an opportunity to verify the theoretical concepts they have learned and also the complexity and requirements of planning experts in this area.*
1. Tension test on M.S. rod
 2. Shear test on M.S. rod
 3. Hardness test - Brinell, Rock well, Vickers and rebound
 4. Impact test - Izod and Charpy
 5. Torsion test on M.S. rod
 6. Spring test
 7. Torsional pendulum - determination of ' N' of wires
 8. Compression tests - bricks, concrete cubes

Internal Continuous Assessment (*Maximum Marks-50*)

60%-Laboratory practical and record
30%- Test/s
10%- Regularity in the class

Semester End Examination (*Maximum Marks-50*)

70% - Procedure, conducting experiment, results, tabulation, and inference
20% - Viva voce
10% - Fair record

PE09 601: Tool Engineering

Teaching scheme

4 hours lecture and 1 hour tutorial per week

Credits: 5

Objectives

- To give an exposure on different cutting tools, clamping and fixing methods, jigs used for different operations like turning, milling, drilling etc
- To give exposure to piercing and blanking operations

Module I (18 hours)

Design of Cutting Tools :- Brief history of metal cutting process - design of single point cutting tools for turning, boring, shaping, planing and slotting - design of multi point cutting tools :- milling cutters, drills, reamers, taps and dies – classification of multipoint cutting tools – simple problems

Module II (18 hours)

Principles of location and clamping – locating and clamping methods and devices – design of drill jig – types of drill jigs – general considerations in the design of drill jig – drill bushings – methods of construction – jigs in modern manufacturing – problems on design of simple jigs

Module III (18 hours)

Design of Fixtures :- Fixtures and fixture economics – types of fixtures – Vice fixtures – Milling fixtures – Boring fixtures – Broaching fixtures – Lathe fixtures – grinding fixtures – problems on design of simple fixtures.

Module IV (18 hours)

Design of sheet metal blanking and piercing dies: - Introduction to die cutting operations – Presses – Cutting action in punch & die operations – die clearance – blanking & piercing die construction – pilots – strippers & pressure pads – simple problems

Text Book

1. Cyril Donaldson, George.H.Lecain, V.C.Goold, *Tool Design*, TMH publishing Co., 3rd edition

Reference Books

1. ASTME, *Fundamentals of tool design*
2. HMT, *Production Technology*, Tata Mc Graw Hill Publishers
3. G R Nagpal, *Tool Engineering & Design*, Khanna Publishers

Internal Continuous Assessment (Maximum Marks-30)

- 60% - Tests (minimum 2)
- 30% - Assignments (minimum 2) such as home work, problem solving, group discussions, quiz, literature survey, seminar, term-project, software exercises, etc.
- 10% - Regularity in the class

University Examination Pattern

PART A: Short answer questions (one/two sentences) 5 x 2 marks=10 marks

All questions are compulsory. There should be at least one question from each module and not more than two questions from any module.

PART B: Analytical/Problem solving questions 4 x 5 marks=20 marks

Candidates have to answer four questions out of six. There should be at least one question from each module and not more than two questions from any module.

PART C: Descriptive/Analytical/Problem solving questions 4 x 10 marks=40 marks

Two questions from each module with choice to answer one question.

Maximum Total Marks: 70

PE09 602: Metal Forming

Teaching scheme

3 hours lecture and 1 hour tutorial per week

Credits: 4

Objectives

- *To provide an exposure to the basic concepts of plasticity which is essential for in the analysis of metal forming processes*
- *To get familiar with the metal forming techniques, tools and processes*

Module I (14 hours)

Theory of stress – Stress tensor – Spherical and Deviator stress tensors – Transformation equations – Principal stresses – Invariants – Octahedral stress – Maximum shearing stress – Theory of strain – Strain tensor – Spherical and Deviator strain tensors – Transformation equations – Principal Strains – Invariants – Octahedral strain – Compatibility equations

Module II (14 hours)

Theory of Plasticity – Von-Mises and Tresca yield criteria – Failure theories – Plastic stress-strain relations – Saint Venent's theory of plastic flow – Reuss theory of elasto-plastic deformation – Hencky's theory of small plastic deformations – Two dimensional Plastic flow – Equilibrium equations referred to arbitrary Cartesian co-ordinates – Equilibrium equations referred to slip lines

Module III (13 hours)

Forging :- Type of forging operations – design of forging dies – defects in forging – NDT – Extrusion – Equipment for extrusion – Processes of extrusion – Properties of extruded metal – Defects in extruded products – Hot and cold drawing - properties –formability, formability limit diagram, defects – Deep drawing, defects in deep drawing,- stretch forming.

Module IV (13 hours)

Rolling: - Rolling process – Rolling mills – properties of rolled components – stresses in rolling – rolling load calculation - Sheet metal work – Sheet metal and press working – Sheet metal joints – Types of presses and dies – Shearing and spinning of metals
Introduction to powder metallurgy

Text Books_

1. L S Srinath, *Advanced Mechanics of solids*, Prentice Hall of India

Reference books

1. Timonshinko & Goodyear, *Theory of Elasticity*, Tata Mc Graw Hill
2. Dr.Sadhu Singh, *Theory of Plasticity*, Khanna
3. L.S.Srinath, *Theory of Plasticity*
4. Hoffman & Sachs, *Introduction to theory of Plasticity for Engineers*, Mc Graw Hill

All questions are compulsory. There should be at least one question from each module and not more than two questions from any module.

PART B: *Analytical/Problem solving questions* *4 x 5 marks=20 marks*

Candidates have to answer four questions out of six. There should be at least one question from each module and not more than two questions from any module.

PART C: *Descriptive/Analytical/Problem solving questions* *4 x 10 marks=40 marks*

Two questions from each module with choice to answer one question.

Maximum Total Marks: 70

PE09 603: Industrial Engineering

Teaching scheme

3 hours lecture and 1 hour tutorial per week

Credits: 4

Objectives

- *To provide a basic knowledge on various industrial engineering principle and tools and need for analyzing engineering activities.*
- *To familiarise the students with the design, improvement and installation of integrated systems of men, materials and equipments*

Module I (14 hours)

Introduction to Industrial Engineering – Definition – Functions- Historical Development of Industrial engineering – Applications of Industrial Engineering - Productivity – Input output model - factors affecting Productivity – Productivity Ratios - Improving productivity – Indian Industry – Productivity of Indian industry

Module II (14 hours)

Product design and development – Good Product Design – Product planning – Product development – Product life Cycle - Products and services – Product Standardization, Simplification, Specialization and Interchangeability – Value Analysis - Value Engineering

Module III (13 hours)

Work Study – Scope and Objectives – Method Study Procedure – Process Charts – Flow diagram- Principles of motion economy – Micro motion study – Cycle graph- Chronocyclegraph – SIMO Chart – Work Measurement – Time study – Performance rating – standard time – allowances – Work sampling – PMTS – Standard data

Module IV (13 hours)

Industrial safety – Safety management – Industrial accidents and accident prevention- Safety Organization, Councils and safety meetings, safety audits – Safe workplace layout- personal protective equipments - Safety motivation – Hazard analysis – Industrial pollution and pollution control – Environmental impact assessment- Environmental Management Systems

Reference books

Donald R Herzog, *Industrial Engineering Methods and Controls*, Prentice Hall
H.B. Maynard, *Industrial Engineering Handbook*, McGraw-Hill Publishers
W Grant Ireson, Eugene L Grant, *Handbook of Industrial Engineering management*- Prentice Hall
Marvin Mundel, *Motion and Time Study*, Prentice Hall India
ILO, *Introduction to Work Study*, Universal Book Corporation
Harold T Amrine, John A Ritchey etal., *Manufacturing Organization & management*, Pearson Education

Internal Continuous Assessment (Maximum Marks-30)

- 60% - Tests (minimum 2)
- 30% - Assignments (minimum 2) such as home work, problem solving, group discussions, quiz, literature survey, seminar, term-project, software exercises, etc
- 10% - Regularity in the class

PART C: *Descriptive/Analytical/Problem solving questions* *4 x 10 marks=40 marks*

Two questions from each module with choice to answer one question.

Maximum Total Marks: 70

PE09 604 Instrumentation and Control

Teaching scheme

3 hours lecture and 1 hour tutorial per week

Credits: 4

Objectives

- *To give an exposure to the concepts and techniques of control systems*
- *To create knowledge about the various instruments and instrumentation techniques*

Module I (14 hours)

Control systems – principle of automatic control – open and closed loop systems – practical examples – transfer function approach – transfer functions of control components – simple physical systems – analogous systems – error and closed loop transfer functions – signal flow graphs – control system components – DC and AC servomotors – hydraulic and pneumatic systems – process control – concept of stability of linear systems – Routh's criterion of stability

Module II (13 hours)

State space analysis of systems – introduction to state concept – state space representation- state equations of linear continuous data systems – matrix representation of state equation – solution of time invariant state equations – introduction to sample data and digital control systems

Module III (13 hours)

Static performance characteristics of measuring instruments – accuracy ,precision, sensitivity etc. – errors in measurements – statistical treatment of data – treatment of single sample data and multisampling data.

Functional elements of measuring system – various types and classification of transducers, modifying systems and display systems

Module IV (14 hours)

Measurement of pressure – manometers – diaphragms – bourdon gage – strain gage pressure cell and electrical resistance pressure cell

Measurement of force and torque – elastic transducers – strain gage load cells – mechanical and hydraulic dynamometers

Measurement of flow – obstruction meters – variable area meters – magnetic and ultrasonic flow meters- strain gage flow meters – turbine type flow meters

Measurement of temperature – bimetallic thermometers – thermo couples – pressure thermometers – optical and radiation pyrometers

Measurement of vibration – micrometers – accelerometers – seismic instruments

Text Books

60% - Tests (minimum 2)

30% - Assignments (minimum 2) such as home work, problem solving, group discussions, quiz, literature survey, seminar, term-project, software exercises, etc.

10% - Regularity in the class

University Examination Pattern

PART A: *Short answer questions (one/two sentences)* 5 x 2 marks=10 marks

All questions are compulsory. There should be at least one question from each module and not more than two questions from any module.

PART B: *Analytical/Problem solving questions* 4 x 5 marks=20 marks

Candidates have to answer four questions out of six. There should be at least one question from each module and not more than two questions from any module.

PART C: *Descriptive/Analytical/Problem solving questions* 4 x 10 marks=40 marks

Two questions from each module with choice to answer one question.

Maximum Total Marks: 70

PE09 605: Inspection and Quality Control

Teaching scheme

2hours lecture and 1 hour tutorial per week

Credits: 3

Objectives

- *To provide an insight to various methods of measurements and inspection*
- *To provide an understanding of the statistical methods of quality control*

Module I (9 hours)

Introduction to metrology - Limits, Fits and tolerances – reason for systems of limits – definitions and terminology – shaft based and hole based systems – types of fits – Tolerances – specifications – compound tolerancing – tolerance grades – Taylor’s principles – limit gages.

Linear and angular measurements – comparators – tool maker’s microscope – autocollimator – profile projector.

Module II (11 hours)

Geometric features – basic definition of straightness, flatness, parallelism, roundness, circularity, squareness etc. – principles and equipments for measurement – principles of interferometry
Surface roughness – Definitions – General considerations – Tally surf – Profilometer – roughness indicators – symbols in geometric features.

Gears – measurements and inspections of spur gears – tooth thickness, pitch, base pitch etc. – gauging of gears. Screws – Terminology – measurement and inspection of threads – major, minor, effective diameters, pitch. – gauging of screws.

Module III (8 hours)

Introduction to the concept of quality – quality control - Statistical tools in quality – making predictions using the normal, Poisson, and binomial probability distributions – statistical process control – control charts for variables – X and R charts – process capability indices – control charts for attributes – p, np, c and u charts.

Module IV (8 hours)

Acceptance sampling – lot by lot acceptance using single sampling by attributes – OC curve – average out going quality and the AOQL – double sampling – multiple and sequential sampling – ATI and AFI

Text Books:

1. R K Jain, *Industrial Metrology*, Khanna Publishers
2. Gupta I C, *A text book of Engineering Metrology*, Dhanpat Rai Publications
3. Gerals M Smith, *Statistical Process Control and Quality Improvements*, 5th Edition, Pearson Education, 2004
4. E L Grant, *Statistical Quality Control*, McGraw Hill

Internal Continuous Assessment (Maximum Marks-30)

- 60% - Tests (minimum 2)
- 30% - Assignments (minimum 2) such as home work, problem solving, group discussions, quiz, literature survey, seminar, term-project, software exercises, etc.
- 10% - Regularity in the class

PART C: Descriptive/Analytical/Problem solving questions 4 x 10 marks=40 marks

Two questions from each module with choice to answer one question.

Maximum Total Marks: 70

PE09 L01: Human Resource Management

Teaching scheme

3 hours lecture and 1 hour tutorial per week

Credits: 4

Objectives

- *To have an insight into fundamental aspects related to Human Resource Management viz. Jobs, Recruitment, appraisal, remuneration and Employee relations*

Module I (14 hours)

Personnel management in organizational context - personnel environment - objectives of personnel management - the role of personnel function - personnel activities - structure of the

personnel department - analyzing and design of jobs - job analysis - job description - job specification - role analysis - the job design – Merit Rating

Module II (14 hours)

Recruitment - selection - placement - induction - internal mobility - separations – labour turnover - performance appraisal - performance appraisal system - assessing potential - design of an effective appraisal system – wages and incentives

Module III (13 hours)

Pay and benefits - pay structures - methods of payments - fringe benefits - occupational health and safety - working conditions occupational health and safety - social background and working conditions - ergonomics - regulatory environment - organization commitment - measures for occupational health and safety

Module IV (13 hours)

Employee relations - management employee relations - managing discipline - managing grievance - managing stress - counselling - industrial relations implications of personnel policies - nature of employment relationships - place of unions in organizations - industrial conflict - managing for good industrial relations

Two questions from each module with choice to answer one question.

Maximum Total Marks: 70

PE09 L02: Marketing Management

Teaching scheme

3 hours lecture and 1 hour tutorial per week

Credits: 4

Objectives

- *To give an exposure on various aspects of marketing management viz. Environment, Consumer behaviour, Product management, Promotion decisions, and marketing research*

Module I (14 hours)

Understanding marketing management – Defining marketing – Company orientation – Adopting markets to new economy – E-business building customer satisfaction, value and retention – Customer value – Customer relation ship management.

Module II (13 hours)

Analyzing market opportunities -Gathering information & measuring market demand - Marketing research system -Forecasting – Analyzing consumer markets and buyer behaviour – Buying decision process – Identifying market segments and selecting target markets – Market segment & targeting.

Module III (14 hours)

Developing market strategies – Positioning & differentiating market through product life cycle – Differentiating tools – Determining new market offerings- Setting the product and branding strategy – Product mix and line – Brand decisions.

Module IV (13 hours)

Managing & defining market program – Managing intergraded marketing communication – Effective communication process – Managers advertising, sales promotion, public relation & direct marketing – Managing the sales force– Personal selling.

Two questions from each module with choice to answer one question.

Maximum Total Marks: 70

PE09 L03: Machine Tool Design

Teaching scheme

3 hours lecture and 1 hour tutorial per week

Credits: 4

Objectives

- *To give knowledge about various machine components and installation and testing of machine tools*

Module I (14 hours)

Machine beds and columns - relative merits of different types of beds and columns as regards to materials - construction - stiffness and rigidity - design considerations of beds and columns -

Syllabus - B.Tech. Production Engg.

concrete and metallic foundation - sources and effects - equipment for the study of vibration - vibration isolation

Module II (14 hours)

Slides ways - different types of slide ways - wear adjustments - design consideration - lubrication surface finish - straightness and hardness requirements of slide way

Module III (13 hours)

Drive systems - selection of range of feeds and speeds - layout in AP, GP and LP - standardisation of speeds and feeds - ray diagram for machine tool gear boxes - various types of drives such as sliding and clutched drives - Rupert drives - feed gear box analysis - Norton and meander drives - stepless drive

Module IV (13 hours)

Erection and testing - equipment needed for erection - erection procedure - commissioning - check list - safety - I.S. specification for testing machine tools - acceptance tests for lathe - milling - drilling - grinding machines - maintenance and reconditioning of machine tool - need for maintenance - maintenance policies - maintenance organisation - principles of reconditioning - repair methods for beds - slides - spindles - gears - lead ,screw and bearings

- 60% - Tests (minimum 2)
30% - Assignments (minimum 2) such as home work, problem solving, group discussions, quiz, literature survey, seminar, term-project, software exercises, etc.
10% - Regularity in the class

University Examination Pattern

PART A: *Short answer questions (one/two sentences)* 5 x 2 marks=10 marks

All questions are compulsory. There should be at least one question from each module and not more than two questions from any module.

PART B: *Analytical/Problem solving questions* 4 x 5 marks=20 marks

Candidates have to answer four questions out of six. There should be at least one question from each module and not more than two questions from any module.

PART C: *Descriptive/Analytical/Problem solving questions* 4 x 10 marks=40 marks

Two questions from each module with choice to answer one question.

Maximum Total Marks: 70

PE09 L04: Mechatronics

Teaching scheme

3 hours lecture and 1 hour tutorial per week

Credits: 4

Objectives

- *To acquire an understanding of sensors, actuating devices, signal processing etc to have a clear idea about advanced manufacturing systems*

Module I (10 hours)

Introduction to Mechatronics: - Mechatronics – Integrated Design issues – Key elements – Design process – Advanced approaches in Mechatronics

Syllabus - B.Tech. Production Engg.

Module II (14 hours)

Sensors and Transducers :- Introduction to sensors and transducers – Sensors for motion and position measurement – Force, Torque and tactile sensors – Flow sensors – Temperature sensing devices – Ultrasonic sensors – Vibration control using magneto strictive transducers – Fibre optic devices in mechatronics

Module III (16 hours)

Actuating devices, Signals, Systems & Controls: - DC and AC Drives-Stepper motor – Servo motor – fluid power-design elements – piezoelectric actuators – Introduction to Signals – systems and controls – system representation – Linearisation of Non-linear systems – time delays – measures of system performance.

Module IV (14 hours)

Advanced Applications in Mechatronics: - Sensors for condition monitoring – Mechtronic control in automated manufacturing – Artificial Intelligence

Text Books

1. Devadas Shetty, Richard.A.Kolk,,*Mechatronics System Design*,PWS publishing company1997

Reference Books

1. Bosch, *Mechatronics Theory and Application.*,1998
2. W.Bolton, *Mechatronics*, Longmen,1999
3. *Mechatronic*, Edited by HMT, Bangalore,1998
4. Bradly.D.A, Dawson.D, Burd.N.C,Loadeer.A.J, *Mechatronics, Electronics in Products and Processes*, Chanmall and Hall 1993

Internal Continuous Assessment (Maximum Marks-30)

60% - Tests (minimum 2)

30% - Assignments (minimum 2) such as home work, problem solving, group discussions, quiz, literature survey, seminar, term-project, software exercises, etc.

10% - Regularity in the class

Two questions from each module with choice to answer one question.

Maximum Total Marks: 70

PE09 L05: Advanced Materials and Processing

Teaching scheme

3 hours lecture and 1 hour tutorial per week

Credits: 4

Objectives

- *To give exposure to newer materials used in manufacturing*
- *To give exposure to the advanced techniques used in manufacturing*
- *To enable the student to select the appropriate process according to the materials used*

Module I (14 hours)

Introduction – conventional materials, limitation, need for composites, classification and characteristics of composites, resin matrices, reinforcements, other constituents of fibre, fibre reinforced plastics, ceramics and metal matrix composites – manufacturing of metal matrix composites, solid and liquid state processing – testing of composites – applications

Module II (14 hours)

Introduction to powder metallurgy (P/M) processes – design considerations for P/M tooling – types of compaction – sintering at different atmospheres – liquid phase sintering – secondary processes – P/M applications specifically to cutting tool, bearing and friction materials – nano materials and their applications.

Module III (13 hours)

Special material removal processes – chemical machining, electro chemical machining, electrical discharge machining wire EDM, water jet machining – high speed machining – micro machining-casting of non-ferrous metals

Module IV (13 hours)

Surface structure and properties – surface coatings, hard facing, thermal spraying, vapour deposition, ion implantation, hot dipping – coating of cutting and forming tools

Reference Books

Maximum Total Marks: 70

PE09 607(P): Manufacturing Sciences Lab

Teaching scheme

3 hours practical per week

Credits: 2

Objectives

- *To train students to conduct experiments in manufacturing sciences*

Syllabus - B.Tech. Production Engg.

- *To train the students to plan experiments for evaluating practical situations*

1. Specimen preparation for microscopic inspection
2. Study and use of metallurgical microscope, microstructure of ferrous and non - ferrous materials
3. Heat treatment processes - study of various parameters - hardness
4. Determination of cutting forces in turning - lathe tool dynamometer
5. Determinations of tool wear - tool makers microscope
6. Preparation of specimen for sand mould testing - tension, compression, hardness, porosity
7. Sand sieve analysis
8. Spark testing & scratch testing of materials
9. Preparation of specimens for welding - gas, arc welding processes - specifications
10. Measurement of HAZ - structural changes, NDT of welded joints

Internal Continuous Assessment (*Maximum Marks-50*)

60%-Laboratory practical and record
30%- Test/s
10%- Regularity in the class

Semester End Examination (*Maximum Marks-50*)

70% - Procedure, conducting experiment, results, tabulation, and inference
20% - Viva voce
10% - Fair record

PE09 608 (P): CAD/CAM Lab

Teaching scheme

3 hours practical per week

Credits: 2

Objectives

- *Experiments are aimed at providing the student an atmosphere in which he will be exposed to some of the basic CAD/CAM techniques*

University of Calicut

CAD - Laboratory

1. Modelling of machine components
2. Assembly modelling
3. Preparation of detail drawing from solid model
4. Finite element modelling and analysis
5. Mechanism modelling and analysis

CAM – Laboratory

1. Programming of CNC Lathes
2. Programming of machining centres
3. NC Programming from CAD models
4. Design of moulds from CAD models

Internal Continuous Assessment (*Maximum Marks-50*)

60%-Laboratory practical and record
30%- Test/s
10%- Regularity in the class

Semester EndExamination (*Maximum Marks-50*)

70% - Procedure, conducting experiment, results, tabulation, and inference
20% - Viva voce
10% - Fair record

PE09 701: Production Management

Teaching scheme

4 hours lecture and 1 hour tutorial per week

Credits: 5

Objectives

- *To give an exposure to the different aspects of Production Management, viz., Production Planning and Control, materials Management and Quality management*

Module I (18 hours)

Production and Operations planning - _Production Systems - Forecasting of Demand- Variables – Opinion and Judgmental Methods - Time series methods – Regression & Correlation – Aggregate planning- Objectives - Aggregate planning Methods - Master Scheduling – Objectives – Methods of Master Scheduling

Module II (18 hours)

Material and Capacity requirements planning – MRP Concepts – MRP Logic – System refinements – Capacity management – Manufacturing resource planning (MRP II) – Scheduling and controlling of production activities – Objectives - Scheduling strategy and guidelines - methodology – priority control – capacity control - Scheduling for Job shop, Batch shop and high volume continuous systems- Concepts of ERP

Module III (18 hours)

Materials management- functions of purchasing and materials management – quality – inspection – sources of supply – pricing – inventory management – EOQ- models of replenishment – deterministic and probabilistic – P and Q systems of Inventory – Selective inventory management – ABC,VED,FSN,HML analysis of Inventory – Concept of JIT and zero inventory

Module IV (18 hours)

Plant layout and material handling – plant location - factors affecting selection – plant site - influence of location on plant lay out – location theory models – plant lay out – objectives of good plant layout – types of layout – methods showing flow.

Materials handling – principles of material handling – basic handling systems – handling systems to layout – integrated handlings – material handling equipments

Text Books

1. Joseph G Monks, *Operations Management, Theory and Problems*, McGraw-Hill International edition
2. Setharama, L Narasimhan etal.. *Production Planning and Inventory Control*, Prentice Hall India

Reference Books

Internal Continuous Assessment (Maximum Marks 20)

University Examination Pattern

60	PART A: Short answer questions (one/two sentences)	5 x 2 marks=10 marks
30	All questions are compulsory. There should be at least one question from each module and not more than two questions from any module.	
10	PART B: Analytical/Problem solving questions	4 x 5 marks=20 marks
	Candidates have to answer four questions out of six. There should be at least one question from each module and not more than two questions from any module.	
	PART C: Descriptive/Analytical/Problem solving questions	4 x 10 marks=40 marks
	Two questions from each module with choice to answer one question.	

Maximum Total Marks: 70

PE09 702: Operations Research

Teaching scheme

3 hours lecture and 1 hour tutorial per week

Credits: 4

Objectives

- *To give a quantitative perspective to the decision making process*

Syllabus - B.Tech. Production Engg.

Module I (14 hours)

History and development of O.R. – Linear programming – formulation – graphical solution – Simplex method – two phase method – dual and its solutions – sensitivity analysis

Module II (14 hours)

Transportation and assignment problems – formulation and solutions – tests for optimality – cases of degeneracy – Network techniques – net works : PERT / CPM – Critical path – crashing and resource levelling

Module III (13hours)

Queuing theory – types of queues - Poisson arrival exponential service – single server and multiple server queues

Introduction to simulation techniques – Monte Carlo simulation (No Problems)

Module IV (13 hours)

Decision theory: - Environments – decision making under certainty – decision making under risk, decision making under uncertainty – Game theory – two persons zero sum games – pure strategy and mixed strategy – Decision Tree.

Text Books

1. Kalavathy, *Operation Research*, Vikas Publications
2. N D Vohra, *Quantitative Techniques in Management*, Tata McGraw Hill

Two questions from each module with choice to answer one question.

Maximum Total Marks: 70

PE09 703: Maintenance Engg. & Management

Teaching scheme

2 hours lecture and 1 hour tutorial per week

Credits: 3

Objectives

- To expose the students how the deterioration of plant machinery equipment and other facilities are taking place
- To make them aware of various testing methods, preventive/corrective and timely actions to take including repair replacement etc

Module I (9 hours)

Corrosion - harmful effects – electrochemical mechanism of corrosion - forms of corrosion - corrosion by special environments in industries such as chemical, petrochemical, iron and steel industry - corrosion prevention and control - material selection for corrosion environments - corrosion inhibitors - cathodic and anodic protection –corrosion testing and measurements

Module II (9 hours)

Wear of machine parts - mechanism of wear - different types of wear - effect - factors influencing wear –wear measurements - bearing and lubrication – Types of bearings - bearing material and their requirements - lubricants - basic properties - additives - synthetic lubricants.

Module III (9 hours)

Scope and importance of maintenance - types of maintenance – corrective maintenance - preventive maintenance - concepts of total maintenance - terro technology - strategies and policies of organizing a preventive maintenance programme – monitoring techniques – vibration and noise monitoring analysis – vibration severity chart-shock pulse method-vibration signature analysis-ferrography-spectrometric oil analysis programme.

Module IV (9 hours)

Reliability - definition of reliability - product reliability - time depending relationship to quality assurance - measures of reliability - failure rate - failure distribution curves - MTBF - bath tub curve - reliability improvement - redundancy and its uses - maintainability and availability - safety and house keeping - replacement analysis - useful and economic life of equipment - reasons for replacement - factors affecting replacement decisions - economic analysis replacement criteria - group replacement – simple problems

TextBooks

1. Collacott, *Vibration Monitoring and Diagnosis - Technique for Cost Effective Plant Maintenance*, John Willey

Reference Books

- 4.Maj Gen Apthe S.S., *Plant Maintenance*, Delhi Productivity Council
- 5.Srinath, *Concept of Reliability*, Affiliated East West Publishers

Internal Continuous Assessment (Maximum Marks-30)

- 60% - Tests (minimum 2)
- 30% - Assignments (minimum 2) such as home work, problem solving, group discussions, quiz, literature survey, seminar, term-project, software exercises, etc.
- 10% - Regularity in the class

University Examination Pattern

PART A: Short answer questions (one/two sentences)

5 x 2 marks=10 marks

All questions are compulsory. There should be at least one question from each module and not more than two questions from any module.

PART B: Analytical/Problem solving questions

4 x 5 marks=20 marks

Candidates have to answer four questions out of six. There should be at least one question from each module and not more than two questions from any module.

PART C: Descriptive/Analytical/Problem solving questions

4 x 10 marks=40 marks

Two questions from each module with choice to answer one question.

Maximum Total Marks: 70

PE09 704: Management Information Systems

Teaching scheme

2 hours lecture and 1 hour tutorial per week

Credits: 3

Objectives

- To give an awareness of information sources, flow and its processing for making correct decisions.

Module I (9 hours)

Information systems-functions of management – levels of management- framework for information system- sequence of development of MIS- systems approach- systems concepts – systems and their environment- effects of system approach in information system design – using systems approach in problem solving- strategic use of information technology

Module II (9 hours)

A brief overview of computer hardware and software components- file and database management systems- communication system elements- introduction to network components-topologies and types- remote access- reasons for managers to implement networks- distributed systems- the internet and office communications.

Module III (9hours)

Application of information system to functional, tactical and strategic areas of management, decisions support systems and expert systems

Module IV (9 hours)

Information system planning- critical success factor- business system planning- ends/means analysis-organising the information systems plan- systems analysis and design- alternate application development approaches-organisation of data processing-security and ethical issues of information systems

TextBooks

1. Schultheis R. & Mary Sumner, *Management Information Systems-the Manager's View*, Tata McGraw Hill

Reference Books

3. Alter S., *Information Systems: A Management Perspective*, Addison Wesley
4. Effy Oz., *Management Information systems*, Thomson, Vikas Publishing House

University Examination Pattern

PART A: Short answer questions (one/two sentences) 5 x 2 marks=10 marks

All questions are compulsory. There should be at least one question from each module and not more than two questions from any module.

PART B: Analytical/Problem solving questions 4 x 5 marks=20 marks

Candidates have to answer four questions out of six. There should be at least one question from each module and not more than two questions from any module.

PART C: Descriptive/Analytical/Problem solving questions 4 x 10 marks=40 marks

Two questions from each module with choice to answer one question.

Maximum Total Marks: 70

PE09 707 (P): Industrial Engineering Lab

Teaching scheme
3 hours Practical per week

Credits: 3

Objectives

- *To plan and conduct experiments to study and evaluate theoretical concepts in industrial engineering and quality control*
 - *To train the students to plan experiments for evaluating practical situations*
1. Study and Experimentation on Central Limit Theorem_- for different population distributions, Triangular Distribution, Rectangular Distribution and Normal Distribution
 2. Factorial Experimentation - Analysis of variance and test of Significance on different process/product parameters._
 3. Motion Study – Preparation of Flow process charts, outline process charts flow diagram and multiple activity charts, two handed process charts, for industrial operations.
 4. Application of Principles of Motion economy – determination of time savings by improving work methods
 5. Time Study – Determination of standard time of an operation by stopwatch method.
 6. Plant layout and material handling – Layout planning and optimization of material handling using techniques of string diagram travel charting etc.
 7. Variable control charts – Plotting and interpretation of variable control charts for X and R and Process capability determination.
 8. Attribute Control charts – Plotting and interpretation of attribute control charts P-Charts and C- Charts
 9. Acceptance sampling by attributes – Plotting and interpretation of Operating Characteristic curves, determination of AQL, LTPD, Risks and AOQL
 10. Measurement of effect of Work on Human Body – Using ECG, BP Monitor, Tread Mill etc and ergonomical design.
 11. Measurement and analysis of productive Skills - Direct and indirect eye hand co ordination measurement using co ordination testers
 12. Measurement and analysis of dexterity, speed, skill, visual sensation and tactile sensation abilities – Using coin sorters and match board equipments
 13. Measurement and analysis of human visual fields, depth perception – using Depth perception tester and Perimeter.

Internal Continuous Assessment (*Maximum Marks-50*)

60%-Laboratory practical and record
30%- Test/s
10%- Regularity in the class

Semester End Examination (*Maximum Marks-50*)

70% - Procedure, conducting experiment, results, tabulation, and inference
20% - Viva voce
10% - Fair record

PE09 708(P): Metrology Lab

Teaching scheme

3 hours practical per week

Credits: 3

Objectives

- *To provide information of how actual measurements are conducted and also about the selection of measuring instruments for different purposes*
1. Testing of gears
 2. Determination of cutting forces on tool bits - lathe, drilling machine, milling machine and grinding machine
 3. Measurement of tool signature – single point tools using tool makers microscope
 4. Measurement of surface roughness
 5. Use of comparators - mechanical, optical, electrical & pneumatic
 6. Determination of cutting tool temperature using thermocouples
 7. Use of profile projectors
 8. Acceptance Test of machine tools - lathe, shaper, milling and grinding machines
 9. Measurement of straightness and flatness
 10. Measurement of vibrations
 11. Measurement of area
 12. Measurement of sound
 13. Measurement of speed

Internal Continuous Assessment (*Maximum Marks-50*)

60%-Laboratory practical and record
30%- Test/s
10%- Regularity in the class

Semester End Examination (*Maximum Marks-50*)

70% - Procedure, conducting experiment, results, tabulation, and inference
20% - Viva voce
10% - Fair record

PE09 709(P): Project

Teaching scheme
1 hour per week

Credits: 1

- The project work should enable the student to take up an engineering problem. Analyse it and suggest solutions. The student can take up an industrial problem or can work in house.
- He is expected to be under an academic guide and an industrial guide depending on whether the project is in house or in an industry.
- The student is expected to undertake a project in the areas like design, maintenance, manufacturing, management etc after due consultation with academic guide and industrial guide as per the situation.
- During the 7th semester he is expected to finalise the project topic and do the necessary literature survey. He shall submit a report of the work done at the end of the semester. Based on this internal evaluation will be done.

PE09 801: Financial Management

Teaching scheme

4 hours lecture and 1 hour tutorial per week

Credits: 5

Objectives

- To give an insight into various aspects of financial management and management accounting

Module I (18 hours)

Introduction to Financial Management – functions and role – fundamentals of accounting – understanding financial statements and its analysis – ratio analysis

Module II (18 hours)

Management accounting – cost concepts – elements of cost and cost sheet – cost-volume-profit analysis – costing for decision making – control and responsibility accounting – budgetary control

Module III (18 hours)

Time value of money – Capital budgeting – methods of appraisal – cost of Capital and its measurement – capital structure planning - valuation of firms – dividend policy

Module IV (18 hours)

Management of current assets – management of receivables – inventory costs – introduction to international finance

Text books

1. I.M.Pandey., *Financial Management* Vikas Publications
2. I.M.Pandey., *Management Accounting* Vikas Publications
3. Khan & Jain, *Financial Management*, TMH

Reference books

1. Prasannachandra, *Financial Management*, TMH
2. Dhameja & Sastry, *Finance & Accounting*, Wheeler Publishing
3. A A Atkinson *Management Accounting* Pearson Education
4. Jame C.Van Horne, *Financial Management*, Pearson Education

Internal Continuous Assessment (Maximum Marks-30)

60% - Tests (minimum 2)

30% - Assignments (minimum 2) such as home work, problem solving, group discussions, quiz, literature survey, seminar, term-project, software exercises, etc.

10% - Regularity in the class

University Examination Pattern

PART A: Short answer questions (one/two sentences)

5 x 2 marks=10 marks

All questions are compulsory. There should be at least one question from each module and not more than two questions from any module.

PART B: Analytical/Problem solving questions

4 x 5 marks=20 marks

Candidates have to answer four questions out of six. There should be at least one question from each module and not more than two questions from any module.

PART C: Descriptive/Analytical/Problem solving questions

4 x 10 marks=40 marks

Two questions from each module with choice to answer one question.

Maximum Total Marks: 70

PE09 802: Computer Integrated Manufacturing

Teaching scheme

2 hours lecture and 1 hour tutorial per week

Credits: 3

Objectives

- To give an idea of advanced manufacturing and various elements and sub systems that go into it

Module I (9 hours)

Introduction - evolution of CAD/CAM and CIM - scope of CIM - segments of generic CIM - computers and workstations - an overview of CIM software - product development through CAD and CAE - geometric modelling techniques - automated drafting - graphic standards - engineering analysis - optimization - principles of concurrent engineering

Module II (9 hours)

Automated process planning - process planning - general methodology of group technology - code structures variant and generative process planning methods - AI in process planning - process planning software - CNC technology - principle of numerical control - types of CNC machines - features of CNC systems - programming techniques - capabilities of a typical NC CAM software - integration of CNC machines in CIM environment - DNC - flexible manufacturing systems

Module III (9 hours)

Robotics and automated assembly - types of robots and their performance capabilities - programming of robots - hardware of robots - kinematics of robots - product design for robotized manufacturing - selecting assembly machines - feeding and transfer of parts - applications of robots in manufacture and assembly - sensors - simulation and automated quality control - types of simulation - simulation methodology - simulation languages and packages - applications - statistical process control - objectives of CAQC - types of CMM - non-contact inspection methods - in process and post process metrology - flexible inspection systems

Module IV (9hours)

Data communications and technology management - technology issues - configuration management - database systems - management of technology - networking concepts LAN, MAN and WAN - SQL fundamentals - MAP/TOP fundamentals - CIM models - IBM - Siemens, DEC, ESPRIT - CIM OSA model - economics of CIM - implementation of CIM- Product data management and Product lifecycle management

Text Books

Internal Continuous Assessment (Maximum Marks-30)

60% - Tests (minimum 2)

30% - Assignments (minimum 2) such as home work, problem solving, group discussions, quiz, literature survey, seminar, term-project, software exercises, etc.

10% - Regularity in the class

University Examination Pattern

PART A: Short answer questions (one/two sentences) 5 x 2 marks=10 marks All questions are compulsory. There should be at least one question from each module and not more than two questions from any module. *PART B: Analytical/Problem solving questions 4 x 5 marks=20 marks* Candidates have to answer four questions out of six. There should be at least one question from each module and not more than two questions from any module. *PART C: Descriptive/Analytical/Problem solving questions 4 x 10 marks=40 marks* Two questions from each module with choice to answer one question. *Maximum Total Marks: 70*

PE09 805 (P): Seminar

Teaching scheme
3 hours per week

Credits: 2

Each student shall prepare a paper on any topic of production engineering and after scrutiny and approval by a faculty member, shall present it – each student is expected to participate actively in all seminars – evaluation to be done on the basis of his/her paper and also active participation other seminars

Scheme of evaluation

Presentation and discussion	= 25
Material content	= 10
Report	= 10
Participation and attendance	= 5
Total marks	= 50

PE09 806 (P): Project

Teaching scheme
6 hours per week

Credits: 7

This is the continuation of PE 09 709 (P) The student shall conduct the data collection and analysis for the project. After the completion the students shall prepare a project report and submit it

Scheme of Evaluation	
Thesis defence	= 60
Report	= 40
Total marks	= 100

PE09 807 (P): Viva Voce

Teaching scheme

Credits: 3

Each student is required to appear for a viva-voce examination - the student shall bring his/her project reports and seminar paper for this examination. The relative weightage of questions shall be as follows.

Scheme of Evaluation	
Subjects	: 40
Project	: 30
Seminar	: 20
Industrial Training/Industrial visit/ Industrial tour or paper presented at national level	: 10
Total marks	: 100

PE09 L06: Engineering Materials

Teaching scheme

3 hours lecture and 1 hour tutorial per week

Credits: 4

Objectives

- To give a detailed exposure of various materials used in Engineering.
- To have knowledge about Ferrous as well as non ferrous materials like Ceramics, Composite, polymer etc.

Module I (14 hours)

Physical properties of metals:- Melting point – density – Thermal properties – Electrical properties – Magnetic properties – Optical properties – Mechanical properties:- Tensile strength – Moduli of elasticity – Hardness – Brinell, Rockwell and Vickers hardness – Impact Strength – Izod and Charpy tests – Toughness – Fatigue - Creep

Module II (14 hours)

Ferrous metals: – Iron-Carbon equilibrium diagram – Time-Temperature Transformation curves – Heat treatment of carbon steels: – Annealing – Spheroidising – Normalizing – Tempering – Hardening – Effect of alloying elements – Stainless steel – cast iron.

Module III (13 hours)

Non-ferrous metals – Copper and its alloys – Aluminium and its alloys – Nickel and its alloys – Titanium and its alloys

Module IV (13 hours)

Ceramics :- Mechanical properties – Brittle fracture – Static fatigue – Creep – Thermal shock – Optical properties – Refractive index – Reflectance - Transparency – Translucency and opacity
Polymers: – Polymerization – Structural features of polymers – Thermoplastics and thermosetting polymers – additives – Mechanical properties – Optical properties
Composites: – Fiber reinforced composites – Aggregate composites – Mechanical properties

Text Books

1. William D Calister *Material Science and Engineering*, , John Wiley and sons Inc
2. Donald R Askeland, *The Science and Engineering of materials*, PWS-KENT Publishing co
3. Sidney H Avener, *Physical Metallurgy*, Mc Grow Hill
4. R A Higgins, *Engineering Metallurgy*, VIVA (Low Priced Student Edition)
5. Kingeri, *Introduction to Ceramics*,

Internal Continuous Assessment (Maximum Marks-30)

- 60% - Tests (minimum 2)
30% - Assignments (minimum 2) such as home work, problem solving, group discussions, quiz, literature survey, seminar, term-project, software exercises, etc.
10% - Regularity in the class

University Examination Pattern

PART A: Short answer questions (one/two sentences) 5 x 2 marks=10 marks

All questions are compulsory. There should be at least one question from each module and not more than two questions from any module.

PART B: Analytical/Problem solving questions 4 x 5 marks=20 marks

Candidates have to answer four questions out of six. There should be at least one question from each module and not more than two questions from any module.

PART C: Descriptive/Analytical/Problem solving questions 4 x 10 marks=40 marks

Two questions from each module with choice to answer one question.

Maximum Total Marks: 70

PE09 L07: Linear System Analysis

Teaching scheme

3 hours lecture and 1 hour tutorial per week

Credits: 4

Objectives

- To enable the students to model mechanical systems and also to analyze different linear time-invariant systems.

Module I (14 hours)

System concepts and modeling of systems: Systems – system variables & parameters - classification of systems – continuous-time/discrete-time, static/dynamic, linear/non-linear, distributed/lumped, time invariant/variant, stochastic/deterministic systems – system modeling & approximations - superposition principle — modeling of electrical systems - dynamic equations using KCL & KVL of RL, RC and RLC circuits – transfer function – impulse response – development of block diagrams of electrical networks – block diagram reduction – signal flow graphs – Mason’s gain formula

Module II: (14 hours)

Modeling of mechanical systems: Modeling of translational and rotational mechanical systems – differential equations for mass, spring, dashpot elements – D’Alembert’s principle – rotational inertia, stiffness & bearing friction - dynamic equations & transfer function for typical mechanical systems – analogous systems – force-voltage & force-current analogy - torque-voltage & torque-current analogy - gear trains – equivalent inertia & friction referred to primary and secondary shafts – resistance & capacitance of thermal system, liquid level system & pneumatic systems – dynamic equations & transfer function for simple systems – electromechanical systems.

Module III: (13 hours)

Time domain analysis : Open loop & closed loop control systems – response to arbitrary inputs – convolution integral – convolution theorem - Time domain analysis – standard test signals - step, ramp, parabolic, impulse – transient and steady state response – first order systems – unit impulse, step & ramp responses of first order systems - second order systems – under damped and over damped systems - unit step response – time domain specifications - time response of higher order systems – steady state error – static position, velocity & acceleration error constants.

Module IV: (13 hours)

State space analysis and stability of systems: Concept of state - state space and state variables - advantage over transfer function approach - state equation for typical electrical , mechanical and electromechanical systems - representation for linear time varying and time invariant systems - solution of state equation for test inputs - zero state and zero input response - concept of stability - bounded input bounded output stability - Routh-Hurwitz criterion of stability for single input, single output linear systems described by transfer function models.

Internal Continuous Assessment (Maximum Marks-30)

60% - Tests (minimum 2)

30% - Assignments (minimum 2) such as home work, problem solving, group discussions, quiz, literature survey, seminar, term-project, software exercises, etc.

10% - Regularity in the class

University Examination Pattern

PART A: Short answer questions (one/two sentences) 5 x 2 marks=10 marks

All questions are compulsory. There should be at least one question from each module and not more than two questions from any module.

PART B: Analytical/Problem solving questions 4 x 5 marks=20 marks

Candidates have to answer four questions out of six. There should be at least one question from each module and not more than two questions from any module.

PART C: Descriptive/Analytical/Problem solving questions 4 x 10 marks=40 marks

Two questions from each module with choice to answer one question.

Maximum Total Marks: 70

PE09 L08: Safety Engineering

Teaching scheme

3 hours lecture and 1 hour tutorial per week

Credits: 4

Objectives

- To impart an awareness about the importance of safety in industrial operations
- To understand various techniques available for ensuring safety in industries

Module I (14 hours)

Importance of safety in industrial operations-Safety information systems-Accident information and reporting-safety performance and reporting-safety education and training

Module II (14 hours)

Hazards-physical-chemical-electrical-biological-ergonomichazards-risk analysis-map method-tabular method-fault tree analysis-hazop analysis

Module III (13 hours)

Fire protection systems-Fire chemistry-industrial fire protection system-water sprinkler-fire hydrant, alarm and detection system-explosion protection system-suppression system-carbondioxide system foam system-halon system-portable extinguisher

Module IV (13 hours)

Safety in engineering industry-safety in metal working machinery-principles of machine guarding-safety in welding and gas cutting-safety in cold forming and hot working of metals-safety in finishing-inspection and testing

Text Books

1. N.V. Krishnan, *Safety in industry*, Jaico publishing house
2. Gupta R.S., *Handbook of fire technology*, Orient Longman
3. James D., *Fire Prevention Handbook*, Butterworths, London 1996

Internal Continuous Assessment (Maximum Marks-30)

- 60% - Tests (minimum 2)
- 30% - Assignments (minimum 2) such as home work, problem solving, group discussions, quiz, literature survey, seminar, term-project, software exercises, etc.
- 10% - Regularity in the class

University Examination Pattern

PART A: Short answer questions (one/two sentences)

5 x 2 marks=10 marks

All questions are compulsory. There should be at least one question from each module and not more than two questions from any module.

PART B: Analytical/Problem solving questions

4 x 5 marks=20 marks

Candidates have to answer four questions out of six. There should be at least one question from each module and not more than two questions from any module.

PART C: Descriptive/Analytical/Problem solving questions

4 x 10 marks=40 marks

Two questions from each module with choice to answer one question.

Maximum Total Marks: 70

PE09 LPE09: Industrial Tribology

Teaching scheme

3 hours lecture and 1 hour tutorial per week

Credits: 4

Objectives

- To have knowledge about the various modes of friction, wear mechanisms, types of lubrication and bearings and also the various surface engineering techniques.

Module I (14 hours)

Surfaces and Friction: - Topography of Engineering surfaces – Contact between surfaces – Sources of sliding Friction – Adhesion Ploughing – Energy dissipation mechanisms – Rolling friction – Sources of Rolling Friction – Stick slip motion – Measurement of Friction

Module II (14 hours)

Wear: - Types of wear – Simple theory of Sliding - Wear Mechanism of sliding wear of metals – Abrasive wear – Materials for adhesive and abrasive situations – Corrosive wear – Surface Fatigue wear situations – Brittle fracture wear – wear of ceramics and polymers – wear measurements

Module III (13 hours)

Lubricants and Lubrication types :- Types and properties of Lubricants – Testing methods – Hydrodynamic Lubrication – Elasto hydrodynamic lubrication – Boundary Lubrication – Hydrostatic Lubrication – Solid lubrication

Module IV (13 hours)

Surface Engineering and Materials for Bearings :- Surface modifications – Transformation Hardening, Surface fusion – Thermo chemical processes – Surface coatings – Plating and anodizing – Fusion processes – Vapour Phase processes – Materials for rolling Element bearings – Materials for fluid film bearings – Materials for marginally lubricated and dry bearings

4 x 5 marks=20 marks

Candidates have to answer four questions out of six. There should be at least one question from each module and not more than two questions from any module.

PART C: Descriptive/Analytical/Problem solving questions

4 x 10 marks=40 marks

Two questions from each module with choice to answer one question.

Maximum Total Marks: 70

PE09 L10: Supply Chain Management

Teaching scheme

3 hours lecture and 1 hour tutorial per week

Credits: 4

Objectives

- *To understand the inventory control techniques, purchasing functions and supply chain strategies of different kinds of industries.*

Module I (14 hours)

Supply chain management (SCM) - concept of logistics and SCM - decision phases - design, planning and operation - decision areas - type of supply chain views - flows in supply chain - supply chain and competitive performance - performance measures for SCM - strategic fit - drivers of supply chain

Module II (14 hours)

Design of the supply chain network – role of distribution – factors influencing the distribution network design – Design options – Value of distributions – Network design in supply chain – role of network, factors to be considered – impact of uncertainty – discounted cash flow analysis – planning demand and supply in a supply chain – demand forecasting – characteristics of forecasting – role of forecasting – aggregate planning strategies. Planning of supply & demand - predictable variability – managing supply, demand.

Module III (13 hours)

Planning & Managing Inventories – role of cycle inventory – Economics of scale to exploit fixed costs & quantity discount – safety Inventory – supply uncertainty – optional level of product availability – Managerial levers to improve the supply chain profitability – sourcing in a supply chain – supplier selection – procurement processes – Transportation in supply Chain – modes of transportation – transportation network design.

Module IV (13 hours)

Revenue management for multiple customer, perishable assets, seasonal demand, bulk & spot contracts - Co-ordinators in supply chain – bull whip effect, Lack of co-ordination on performance, obstacles to co-ordination, Managerial levers to achieve co-ordination .Strategic partnership & thrust – IT in Supply Chain – Customer Relationship Management, Internal Supply Chain Management, Supply Relationship Management – Future of IT in supply chain – role of e-business in supply chain.

Maximum Total Marks: 70

PE09 L11: Technology Management

Teaching scheme

3 hours lecture and 1 hour tutorial per week

Credits: 4

Objectives

- To give exposure to the fundamental aspects related to Technology management viz. Technology - Evolution, Environment. Diffusion Innovation, Intelligence and Technology Strategy

Module I (14 hours)

Management of Technology- Definition and Characteristics- Technological environment- Developments in Technological environment- Innovation-components of innovation – Innovation dynamics at firm level – Technology Evolution – S-Curve- Levels of Technology Development – Characteristics of innovative firms

Module II (14 hours)

Technology Diffusion- Dynamics of diffusion – Factors affecting process of diffusion – Influence of environmental trends – Technology and Competition – Competitive consequences of technological change – Characteristics of competitive domains – Dynamics of change in competitive domains – Influence of environmental trends

Module III (13 hours)

Process innovation – value chains and organization – Modes of value chain configuration – Value chain configuration and organizational characteristics – Technology Intelligence – Mapping Technology Environments – Analytical Tools

Module IV (13 hours)

Technology Strategy- Definition – Technology Business Connection – Key Principles – Technology Strategy types – Framework for formulating technology strategy – Appropriation of Technology - - Evolution – Third Generation approach – External sourcing of technology portfolio – Productivity of In-house Research and Development.

Two questions from each module with choice to answer one question.

Maximum Total Marks: 70

PE09 L12: Software Engineering

Teaching scheme

3 hours lecture and 1 hour tutorial per week

Credits: 4

Objectives

- To provide basic concepts and requirements regarding the design validation, implementation and evaluation of Software systems

Module I (14 hours)

Introduction - FAQs about software engineering - professional and ethical responsibility - system modelling - system engineering process - *the software process* - life cycle models - iteration - specification - design and implementation - validation - evolution - automated process support - *software requirements* - functional and non-functional requirements - user requirements - system requirements - SRS - *requirements engineering processes* - feasibility studies - elicitation and analysis - validation - management - *system models* - context models - behaviour models - data models - object models - CASE workbenches

Module II (14 hours)

Software prototyping - prototyping in the software process - rapid prototyping techniques - *formal specification* - formal specification in the software process - interface specification - behaviour specification - *architectural design* - system structuring - control models - modular decomposition - domain-specific architectures - distributed systems architecture - *object-oriented design* - objects and classes - an object oriented design process case study - design evolution - *real-time software design* - system design - real time executives - *design with reuse* - component-based development - application families - design patterns - *user interface design* - design principles - user interaction - information presentation - user support - interface evaluation

Module III (13 hours)

Dependability - critical systems - availability and reliability - safety - security - critical systems specifications - critical system development - *verification and validation* - planning - software inspection - automated static analysis - clean room software development - *software testing* - defect testing - integration testing - object-oriented testing - testing workbenches - critical system validation - *software evolution* - legacy systems - software change - software maintenance - architectural evolution - software re-engineering - data re-engineering

Module IV (13 hours)

Software project management - project planning - scheduling - risk management - *managing people* - group working - choosing and keeping people - the people capability maturity model - *software cost estimation* - productivity estimation techniques - algorithmic cost modelling, project duration and staffing *quality management* - quality assurance and standards - quality planning - quality control - software measurement and metrics - *process improvement* - process and product quality - process analysis and modelling - process measurement - process CMM - *configuration management* - planning - change management - version and release management - system building - CASE tools for configuration management

PE09 L13: Project Management

Teaching scheme

3 hours lecture and 1 hour tutorial per week

Credits: 4

Objectives

- To give exposure to the major aspects of project viz.. Project, Planning, Analysis, Selection, Implementation and review

Module I (14 hours)

Planning - Capital Expenditures – Phases of Capital Budgeting – Levels of decision Making – Facets of Project analysis- Feasibility Study – Objectives of Capital Budgeting – Resource Allocation framework- Key Criteria- Elementary Investment strategies – Portfolio planning tools – Generation of project Ideas – Monitoring the environment – Corporate appraisal – Scouting for project ideas – Preliminary Screening – Project rating index – Sources of Positive net present value

Module II (14 hours)

Analysis – Market and demand analysis – Situational analysis and specification of objectives – Collection of secondary information - Conduct of market survey – Characterization of Market – demand Forecasting – Market planning – Technical analysis- Material inputs and utilities – Manufacturing process/technology – Product Mix – Plant capacity – Location and site -machineries and equipments – Structures and civil works – Project charts and layouts – Work schedule – Financial Analysis – Cost of project – means of finance – Estimates of sales and Production – Cost of production – Working capital requirements and its financing – Profitability projections – Break even point – projected cash flow statements and balance sheets

Module III (13 hours)

Project Cash flows – Basic Principles for measuring cash flows – Components of cash flow – Cash flow illustrations – Viewing a project from different points of view – Time value of money – Future Value of a single amount – Future value of an annuity – Present value of a single amount – Present Value of an annuity- Cost of capital – Cost of debt capital – cost of preference capital – Rate of return – Cost of external equity and retained earnings - Determination of weights – Appraisal criteria – Net present value – Cost benefit ratio- Internal rate of return- Urgency – payback period

Module IV (13 hours)

Implementation- Forms of Project organization – Project planning – Project control – Human Aspects of Project management – Network Techniques – Development of Network – Time estimation – Critical path determination – Scheduling under limited resources – PERT Model – CPM Model – Network Cost System – Project review- Initial; review – Performance evaluation – Abandonment analysis

PE09 L14: Finite Element Methods

Teaching scheme

3 hours lecture and 1 hour tutorial per week

Credits: 4

Objectives

- To acquaint with basic concepts of finite element formulation methods.
- To practise finite element methodologies through simple structural and heat transfer problems.

Module 0 (2 hours)

Review : Matrices and matrix operations – solution of system of linear equations – Gauss elimination. Basic equations of elasticity – strain-displacement relations – compatibility - stress-strain relationship – boundary condition – St. Venant's principle - theorem of minimum potential energy – principle of virtual work. Steady state heat conduction equation – Fourier's law – boundary conditions.

(No direct questions from the above part)

Module I (13 hours)

Introduction: Finite element method as a numerical tool for design – basic concepts – formulation procedures – historical development – current trends – free and commercial FE packages.

FE modelling Direct approach: 1-D bar element – element stiffness – assembly of elements – properties of [K] matrix – treatment of boundary conditions – temperature effects – stress computation – support reaction – simple problems. Analogous (1-D) problems of torsion, heat conduction and laminar pipe flow.

Beam element: Beam relationships – 1-D beam element FE formulation - element stiffness matrix – load considerations – boundary conditions – member end forces.

Module II (13 hours)

FE modelling Direct approach : Plane truss element formulation – coordinate transformation – local and global coordinates – element matrices – assembly of elements – treatment of boundary conditions – stress calculation – simple problems - band width of the stiffness matrix – node numbering to exploit matrix sparsity – conservation of computer memory.

Interpolation – shape function – Lagrange interpolation - 1D linear and quadratic, 2D linear triangle and bilinear rectangular elements.

FE formulation from virtual work principle – B-matrix – element matrices for bar and CST elements – load considerations – consistent nodal loads – simple problems.

Module III (13 hours)

Variational methods : – Functionals – weak and strong form – essential and non- essential boundary conditions - Principle of stationary potential energy – Rayleigh-Ritz method –simple examples.

FE formulation from a functional: 2-D steady state heat conduction – element matrices for a triangular element – boundary conditions – simple problems. FE formulation for 2-D stress analysis from potential energy - element matrices - plane bilinear element.

Convergence requirements – patch test – modelling aspects – symmetry – element size and shape – sources of error.

Module IV (13 hours)

Weighted residual methods: Galerkin FE formulation – axially loaded bar – heat flow in a bar.

Isoparametric formulation: Natural coordinates – linear and quadratic bar element – linear triangle and plane bilinear elements for scalar fields – jacobian matrix – element matrices - Gauss quadrature – requirements for isoparametric elements – accuracy and mesh distortion.

Advanced topics: Introduction to non-linear and dynamic finite element procedures, error estimation, coupled problems (only brief details are needed).

Two questions from each module with choice to answer one question.

Maximum Total Marks: 70

PE09 L15: Design for Manufacture

Teaching scheme

3 hours lecture and 1 hour tutorial per week

Credits: 4

Objectives

To impart knowledge about the manufacturing concerns that should be considered while designing a component so as to create a manufacturable design

Module I (14 hours)

Introduction: General design principles for manufacturability-strength and mechanical factors, mechanisms selection, evaluation method, Process capability-Feature tolerances-Geometric tolerances- Assembly limits-Datum features-Tolerance stacks.

Module II (14 hours)

Factors influencing form design: Working principle, Material, Manufacture, Design-Possible solutions-Materials choice-Influence of materials on form design-form design of welded members, forgings and castings – Design and manufacturing of gauges – Go gauge, No Go gauge

Module III (13 hours)

Component design-machining considerations: Design features to facilitate machining-drills-milling cutters-keyways-Doweling procedures, countersunk screws-Reduction of machined areas-simplification by separation-simplification by amalgamation –Design for machinability-Design for economy-Design for clampability-Design for accessibility-design for assembly.

Module IV (13 hours)

Component design –Casting considerations: Design of casting based on parting line considerations-Minimizing core requirements, machined holes, redesign of cast members to obviate cores.

Re-design for manufacture and case studies: Identification of uneconomical design –Modifying the design – group technology. Computer Application for DFMA.

4 x 10 marks=40 marks

Two questions from each module with choice to answer one question.

Maximum Total Marks: 70

PE09 L16: Operations Research II

Teaching scheme

3 hours lecture and 1 hour tutorial per week

Credits: 4

Objectives

To bring the student closer to the real situations by dropping various assumptions that were made to simplify the situations in the course Operations research I

Module I (14 Hours)

Advanced linear programming: - LP in matrix form – convex sets – revised Simplex method – bounded variables algorithm – decomposition algorithm – duality – parametric linear programming – Karmarker – Interior point algorithm

Module II (14 Hours)

Goal programming – single Vs multiple goals – goal programming formulation – algorithms – Integer linear programming – branch & bound algorithms – cutting plane algorithm

Module III (13 Hours)

Dynamic programming: - forward and backward recursion – application in deterministic situations – classical optimization theory – unconstrained problems – constrained problems

Module IV (13 Hours)

Non-linear programming: - Unconstrained non-linear algorithms – Direct search, gradient methods – constrained algorithms – separable programming – Quadratic programming - geometric programming

PE09 L17: Concurrent Engineering

Teaching scheme

3 hours lecture and 1 hour tutorial per week

Credits: 4

Objectives

- To impart knowledge about principles, implementation, scheduling, evaluation of products, design cost and application of expert systems in relation to Concurrent Engineering

Module I (14 hours)

Principles of concurrent engineering: Overview, approaches to CE, computer based CE, various models and trends in CE.

Implementation: Common failure modes and success factors, failure modes, causes and structure, overcoming barriers to the implementation of CE, seven common organization/ technical barriers, actions to overcome above barriers.

Module II (14 hours)

Scheduling concurrent manufacturing projects: Precedence relaxation, composite allocation factor, a decision based approach to CE, frame of reference, decision support problem technique, application and implementation issues.

Concurrent optimization of product design and manufacture: Concept, simultaneous evaluation of product performance and cost, methodologies for concurrent decision making, a cost based DFM system.

Module III (13 hours)

Evaluating product machinability for concurrent engineering: Generative feature interpretation, process selection, machinability evaluation, design for human factors, controls and displays, use of anthropometry, manual material handling.

Designing to cost: Methodologies to reduce cost, aids in designing for cost, quick cost estimation, designing to a cost goal, activity based costing, economic design in concurrent engineering, approaches, issues, integrated product and process design.

Module IV (13 hours)

Application of expert system to engineering design: knowledge representation paradigms, spatial reasoning, integration with CAD database, a generic approach to DFM system description.

Modelling the design process with Petri nets: Concept, properties, time based Petri nets, neuro computing and concurrent engineering, artificial neural networks, manufacturing feature recognition, contributions of ANN for CE. Introduction to current product development techniques.

Text Books

1. Hamid R. Parasaeie, William. G. Sullivan, *Concurrent Engineering Contemporary Issues and Modern Design tools*, Chapman and Hall London 1993

Reference Books

1. Edward., .G.Haug (Editor), *Concurrent Engineering Tools and Technologies for Mechanical Systems Design*, Springer Verlag Publishing Co.
2. *Proceedings of the nato Advanced system Institute on Concurrent Engineering*, Iowa City, May 25, June 5, 1992

Internal Continuous Assessment (Maximum Marks-30)

60% - Tests (minimum 2)

30% - Assignments (minimum 2) such as home work, problem solving, group discussions, quiz, literature survey, seminar, term-project, software exercises, etc.

10% - Regularity in the class

University Examination Pattern

PART A: Short answer questions (one/two sentences) 5 x 2 marks=10 marks

All questions are compulsory. There should be at least one question from each module and not more than two questions from any module.

PART B: Analytical/Problem solving questions 4 x 5 marks=20 marks

Candidates have to answer four questions out of six. There should be at least one question from each module and not more than two questions from any module.

PART C: Descriptive/Analytical/Problem solving questions 4 x 10 marks=40 marks

Two questions from each module with choice to answer one question.

Maximum Total Marks: 70

PE09 L18: Artificial Intelligence in Manufacturing

Teaching scheme

3 hours lecture and 1 hour tutorial per week

Credits: 4

Objectives

To impart knowledge of how knowledge and information can be processed for creating and maintaining automated manufacturing systems.

Module I (14 hours)

Introduction: Components of knowledge base systems, knowledge representation, types, and comparison of knowledge representation schemes.

Knowledge base system: Inference engine, knowledge acquisition, optimization and knowledge base systems for machines.

Module II (14 hours)

Intelligent manufacturing: System components, system architecture and data flow system operation

Flexible machining system: Flexible assembly systems, tool management.

Technology based systems: Design of mechanical elements, refinement approach, and model based approach, design of mechanisms, feature based design, and knowledge based design for automated assembly.

Process planning: Feature recognition, machining optimization, knowledge based systems.

Module III (13 hours)

G Technology: Group technology, models and algorithms, cluster analysis method, knowledge based systems for GT, models and algorithms for machine layout, knowledge based systems for machine layout, scheduling, models and algorithms.

Module IV (13 hours)

Application of artificial neural networks, fuzzy logic and genetic algorithms in manufacturing, ANN for tool wear monitoring, fuzzy control of machine tools, Introduction to neural networks, synaptic integration and neuron models, essential vector operators, back propagation algorithms, application of neural networks to process modelling control, neural network based feed forward active control systems, neural network application to tool condition monitoring in turning machine, condition monitoring in tapping, neural networks in robotics.

Text Books

1. Andrew Kusiak, *Intelligent Manufacturing Systems*, Prectice Hall, 1990

Reference Books

1. Mohammed Jamshidi, *Design and Implementaton of Intelligent Manufacturing Systems*. Prectice Hall, 1995

3. Ibrahim Zeid. *CAD/CAM Thoery and Practice*, MacGraw Hill, 1991
4. Elaine Rich. *Artificial intelligence*. Tata McGraw Hill, 1995

Internal Continuous Assessment (Maximum Marks-30)

60% - Tests (minimum 2)

30% - Assignments (minimum 2) such as home work, problem solving, group discussions, quiz, literature survey, seminar, term-project, software exercises, etc.

10% - Regularity in the class

University Examination Pattern

PART A: Short answer questions (one/two sentences)

5 x 2 marks=10 marks

All questions are compulsory. There should be at least one question from each module and not more than two questions from any module.

PART B: Analytical/Problem solving questions

4 x 5 marks=20 marks

Candidates have to answer four questions out of six. There should be at least one question from each module and not more than two questions from any module.

PART C: Descriptive/Analytical/Problem solving questions

4 x 10 marks=40 marks

Two questions from each module with choice to answer one question.

Maximum Total Marks: 70

PE09 L19: Modern Manufacturing Concepts

Teaching scheme

3 hours lecture and 1 hour tutorial per week

Credits: 4

Objectives

- To acquaint the student about the current scenario in modern manufacturing

Module I (14 hours)

Introduction-product development and strategies-computer automated engineering-simultaneous engineering –JIT,SMED,KANBAN,KAIZEN,FMEA,SCM,ERP.Total quality management, seven statistical tools and seven new tools ,product development- strategically quality management-quality circle ,introduction to ISO and QS standard .

Total Productive maintenance,-evaluation, and maintenance management.

Module II (14 hours)

Green and Agile manufacturing – introduction – agility through group technology, concept of failure mode effect analysis

ERP – Evolution, advantages, integrated management information, integrated data modelling

Module III (13 hours)

Rapid prototyping – Stereo lithography, laminated object manufacturing , selective laser sintering , fused deposition modelling , 3 D inkjet printing , application of rapid prototyping – modular and reconfigurable machine system – fixtures and dies – parallel kinematic structure for machine tools , Stewarts platform , hexapod , application of hexapod in robotics and CMM.

Module IV (13 hours)

Material application – Nano materials – shape memory alloys – working of SMA,SMART material – applications - Micro machining introduction – Laser micro machining – surface micro machining processing techniques – bonding techniques – precision machining – micro assembly techniques – micro manipulators, bulk micro machining.

Reference Books

PART A: Short answer questions (one/two sentences)

5 x 2 marks=10 marks

All questions are compulsory. There should be at least one question from each module and not more than two questions from any module.

PART B: Analytical/Problem solving questions

4 x 5 marks=20 marks

Candidates have to answer four questions out of six. There should be at least one question from each module and not more than two questions from any module.

PART C: Descriptive/Analytical/Problem solving questions

4 x 10 marks=40 marks

Two questions from each module with choice to answer one question.

Maximum Total Marks: 70

PE09 L20: Facilities Planning and Plant Layout

Teaching scheme

3 hours lecture and 1 hour tutorial per week

Credits: 4

Objectives

- To introduce various techniques and tools of layout and other facilities planning in detail so that the student can approach a layout study in the most systematic and scientific way

Module I (14 hours)

Plant location - factors affecting selection of plant site - influence of location on plant layout - location theory models - plant layout - objectives of good plant layout - types of layout - methods showing flow - design of workstations - line balancing - RPW method - Moodi Young method - storage space requirements - simple problems

Module II (14 hours)

Quantitative and qualitative techniques of plant layout designs cross chart – Activity relationship diagrams, systematic layout planning - spiral analysis - travel charts - plot plan by travel charting - assignment algorithm - sequence demand - Wimmerts method - level curves - general consideration in overall design - basic philosophy and approach to computer software like CRAFT, CORELAP, ALDEP etc - simple problems

Module III (13 hours)

Production and physical plant services - receiving storage - warehousing - shipping, tool room, tool cribs etc. industrial buildings - construction - floor coverings - lighting - heating - ventilation - air conditioning - administration and personnel services - space determination and allocation planning of space for office, production, storage etc. allowance for expansion

Module IV (13 hours)

Material handling - principles of material handling - basic handling systems - handling systems to layout - integrated handling systems - material handling and operation research - transportation problems and sequencing – loading – Johnson’s Rule – CDS algorithm – simple problems.

Text Books

1. G K Agarwal, *Plant Layout and Material Handling*, Jain Brothers (New Delhi)

Internal Continuous Assessment (Maximum Marks-30)

60% - Tests (minimum 2)

30% - Assignments (minimum 2) such as home work, problem solving, group discussions, quiz, literature survey, seminar, term-project, software exercises, etc.

10% - Regularity in the class

University Examination Pattern

PART A: Short answer questions (one/two sentences)

5 x 2 marks=10 marks

All questions are compulsory. There should be at least one question from each module and not more than two questions from any module.

PART B: Analytical/Problem solving questions

4 x 5 marks=20 marks

Candidates have to answer four questions out of six. There should be at least one question from each module and not more than two questions from any module.

PART C: Descriptive/Analytical/Problem solving questions

4 x 10 marks=40 marks

Two questions from each module with choice to answer one question.

Maximum Total Marks: 70

PE09 L21: Simulation of Manufacturing Systems

Teaching scheme

3 hours lecture and 1 hour tutorial per week

Credits: 4

Objectives

- To know about the technique of simulating actual industrial scenario

Module I (14 hours)

Introduction to simulation: Areas of application-system and system environment-components of a system-discrete and continuous systems-model of system-types of models-discrete-event system simulation-steps in a simulation study.

Module II (14 hours)

Random number generation: Properties of random numbers-generation of pseudo random numbers-techniques for generating random numbers-tests for random numbers. Random Variable generation: Inverse transforms technique, Exponential-uniform-weibull-triangular-empirical-continuous-discrete distribution-direct transformation for the normal distribution-acceptance-rejection technique-Poisson-gamma

Module III (13 hours)

Input Modelling: Data collection-identifying the distribution with data-parameter estimation-goodness of fit tests-selecting input models with out data.
Design and evaluation of simulation Experiments: Length of simulation runs variance reduction techniques-experimental layout-validation

Module IV (13 hours)

Manufacturing Systems Examples: Simulation of single machine job shop-two machine job shop-simulation of inventory system and simulation of project networks.
Introduction of GPSS: Programming of discrete event using GPSS, case studies

Text Books

1. Jerry Banks and John S., *Carson, Discrete Event System Simulation*, Prentice, Hall of India
2. Gordon G., *Systems Simulation*, Prentice Hall of India Ltd.
3. Narsingh Deo, *Systems simulation with digital computer*, Prentice Hall of India

Reference Books

2. Carrle A, *Simulation of Manufacturing Systems*, John Wiley and Sons Inc.,

Internal Continuous Assessment (Maximum Marks-30)

- 60% - Tests (minimum 2)
30% - Assignments (minimum 2) such as home work, problem solving, group discussions, quiz, literature survey, seminar, term-project, software exercises, etc.
10% - Regularity in the class

University Examination Pattern

PART A: Short answer questions (one/two sentences)

5 x 2 marks=10 marks

All questions are compulsory. There should be at least one question from each module and not more than two questions from any module.

PART B: Analytical/Problem solving questions

4 x 5 marks=20 marks

Candidates have to answer four questions out of six. There should be at least one question from each module and not more than two questions from any module.

PART C: Descriptive/Analytical/Problem solving questions

4 x 10 marks=40 marks

Two questions from each module with choice to answer one question.

Maximum Total Marks: 70

PE09 L22: Integrated Product Development

Teaching scheme

3 hours lecture and 1 hour tutorial per week

Credits: 4

Objectives

- To introduce various IT and CAD tools used for integrating various systems of product development

Module I (14 hours)

Introduction: - Product Development- product development- conceptual design, embodiment design, detailed design, manufacturing, servicing, discard /recycle-

Product Development Organization: - Concurrent engineering - Definition – CE Design Methodologies – CE organization – collaborative product development – co design -

Requirement definition- product requirement and definition- UML diagram

Module II (14 hours)

Use of Information technology in Product Development

Product modelling – parameter based design, Feature based design, multiple view product modelling, knowledge based engineering

Product data management – Concept – function – architecture- product structure – product process – configuration management – product lifecycle management- Use of UML in PDM system design

Module III (13 hours)

Manufacturing competitiveness - Checking the design process - conceptual design mechanism - Qualitative

Physical approach - An intelligent design for manufacturing system - JIT system – Manufacturability evaluation- Design Manufacturing Integration approaches – Meta data based approach- Feature based approach

Module IV (13 hours)

Product data exchange – standardization- STEP – IGES – web based standards – XML – PDML - Integration of systems CAD/ CAM/CAE -

Design for X –manufacturing, supply chain and logistics, customer service and maintenance, environment Integrated information system- development and design- DABA – Virtual enterprise -

Text Books

1. John W. Priest and Jose M. Sanchez , *Product Development and design for manufacturing*, Marcel Dekker Inc.
2. Karl T. Ulrich and Steven D Eppinger, *Product Design and Development*, McGRAW-Hill

6. Ibrahim Zeid, *CAD/CAM Theory and Practice* , McGraw-Hill

Internal Continuous Assessment (*Maximum Marks-30*)

60% - Tests (minimum 2)

30% - Assignments (minimum 2) such as home work, problem solving, group discussions, quiz, literature survey, seminar, term-project, software exercises, etc.

10% - Regularity in the class

University Examination Pattern

PART A: Short answer questions (one/two sentences)

5 x 2 marks=10 marks

All questions are compulsory. There should be at least one question from each module and not more than two questions from any module.

PART B: Analytical/Problem solving questions

4 x 5 marks=20 marks

Candidates have to answer four questions out of six. There should be at least one question from each module and not more than two questions from any module.

PART C: Descriptive/Analytical/Problem solving questions

4 x 10 marks=40 marks

Two questions from each module with choice to answer one question.

Maximum Total Marks: 70

PE09 L23: Total Quality Management

Teaching scheme

3 hours lecture and 1 hour tutorial per week

Credits: 4

Objectives

- To impart knowledge on the concept of quality tools for analysing quality statistical tools in quality acceptance sampling life tests

Module I (14 hours)

Definition of quality-internal and external customers- vision statement – mission statements – objectives – goals – targets- evolution of TQM – Defining TQM – stages in TQ M implementation-TQM models

Module II (14 hours)

SWOT analysis-strategic planning-customer focus-quality function deployment-customer satisfaction measurement-seven new management tools-Deming wheel-zero defect concept-bench marking-six sigma concepts-failure mode and effect analysis-poke yoke

Module III (13 hours)

Five S for quality assurance-quality circle philosophy-failure rate analysis-mean failure rate-mean time to failure (MTTF)-Mean time between failure (MTBF)-hazard models-system reliability-availability- maintenance

Module IV (13 hours)

Quality and cost-characteristics of quality cost-micro analysis of quality cost-measurement of quality-TQM road map- ISO 9000 series certification-ISO 9001:2000 certification-ISO 14000 certification-QS 9000 auditing-Quality auditing- quality awards

Text Books

1. L Suganthi, Anand A Samuel, *Total Quality Management*, PHI
2. Lt.Gen. Lal H, *Total Quality Management*, Wiley Eastern Limited

Reference Books

1. Greg Bounds, *Beyond Total Quality Management*, McGraw Hill Publishers
2. Menon H G, *TQM in New Product Manufacturing*, McGraw Hill Publishers

Internal Continuous Assessment (Maximum Marks-30)

- 60% - Tests (minimum 2)
30% - Assignments (minimum 2) such as home work, problem solving, group discussions, quiz, literature survey, seminar, term-project, software exercises, etc.
10% - Regularity in the class

University Examination Pattern

PART B: Analytical/Problem solving questions 4 x 5 marks=20 marks

Candidates have to answer four questions out of six. There should be at least one question from each module and not more than two questions from any module.

PART C: Descriptive/Analytical/Problem solving questions 4 x 10 marks=40 marks

Two questions from each module with choice to answer one question.

Maximum Total Marks: 70

PE09 L24: Industrial Psychology

Teaching scheme

3 hours lecture and 1 hour tutorial per week

Credits: 4

Objectives

- To give awareness on the Human and Industrial Psychology

Module I (14 hours)

Introduction- psychology as a science- area of applications – study of individual- individual differences- study of behaviour- stimulus- response behaviour- heredity and environment- human mind- cognition- character- thinking- attention- memory- emotion- traits- attitude- personality

Module II (14 hours)

Organizational behaviour- definition –development- fundamental concept- nature of people- nature of organization – an organizational behaviour system- models- autocratic model- hybrid model- understanding a social-system social culture- managing communication- downward, upward and other forms of communication

Module III 13 hours)

Motivation- motivation driver- human needs- behavior modification- goal setting- expectancy model- comparison models- interpreting motivational models- leadership- path goal model- style – contingency approach

Module IV (13 hours)

Special topics in industrial psychology- managing group in organization- group and inter group dynamics- managing change and organizational development- nature planned change- resistance- characteristic of OD-OD process

Text Books

1. Davis K. & Newstrom J.W., *Human Behaviour at work*, Mcgraw Hill International

Reference Books

1. Schermerhorn J.R.Jr., Hunt J.G & Osborn R.N., *Managing, Organizational Behaviour*, John Willy

Internal Continuous Assessment (Maximum Marks-30)

60% - Tests (minimum 2)

30% - Assignments (minimum 2) such as home work, problem solving, group discussions, quiz, literature survey, seminar, term-project, software exercises, etc.

10% - Regularity in the class

University Examination Pattern

PART A: Short answer questions (one/two sentences) 5 x 2 marks=10 marks

All questions are compulsory. There should be at least one question from each module and not more than two questions from any module.

PART B: Analytical/Problem solving questions 4 x 5 marks=20 marks

Candidates have to answer four questions out of six. There should be at least one question from each module and not more than two questions from any module.

PART C: Descriptive/Analytical/Problem solving questions 4 x 10 marks=40 marks

Two questions from each module with choice to answer one question.

Maximum Total Marks: 70

PE09 L25: Enterpreunership

Teaching scheme

3 hours lecture and 1 hour tutorial per week

Credits: 4

Objectives

- To give an idea on entrepreneurial perspectives

Module I (14 hours)

Entrepreneurial perspectives- understanding of entrepreneurship process- entrepreneurial decision process- entrepreneurship and economic development- characteristics of entrepreneur- entrepreneurial competencies- managerial functions for enterprise.

Module II (14 hours)

Process of business opportunity identification and evaluation- industrial policy- environment- market survey and market assessment- project report preparation-study of feasibility and viability of a project-assessment of risk in the industry

Module III (13 hours)

Process and strategies for starting venture- stages of small business growth- entrepreneurship in international environment- entrepreneurship- achievement motivation- time management creativity and innovation structure of the enterprise- planning, implementation and growth

Module IV (13 hours)

Technology acquisition for small units- formalities to be completed for setting up a small scale unit- forms of organizations for small scale units-financing of project and working capital-venture capital and other equity assistance available- break even analysis and economic ratios technology transfer and business incubation

Text Books

Global Electives

CH09 L23 NANOMATERIAL AND NANOTECHNOLOGY

Teaching scheme

Credits: 4

3 hours lecture & 1 hour tutorial per week

Objectives

- To impart the basic concepts of nanotechnology
- To develop understanding about application of nanomaterials.

No Pre-requisites

Module 1 (13 Hours)

Introduction to nanotechnology, nanoscale, electromagnetic spectrum, top down and bottom up approach, particle size, chemistry and physics of nanomaterials, electronic phenomenon in nanostructures, optical absorption in solids, quantum effects.

Module 2 (13 Hours)

Nanomaterials, preparation of nanomaterials like gold, silver, different types of nano-oxides, Al₂O₃, TiO₂, ZnO etc. Sol-gel methods, chemical vapour deposition, ball milling etc. Carbon nanotubes, preparation properties and applications like field emission displays. Different types of characterization techniques like SEM, AFM, TEM & STM.

Module 3 (13 Hours)

Nanocomposites, nanofillers, high performance materials, polymer nanocomposites, nanoclays, nanowires, nanotubes, nanoclusters etc. Smart materials, self assembly of materials, safety issues with nanoscale powders.

Module 4 (13 Hours)

Nanomanipulation, Micro and nanofabrication techniques, Photolithography, E-beam, FIB etc. Nanolithography., softlithography, photoresist materials. Introduction to MEMS, NEMS and nanoelectronics. Introduction to bionanotechnology and nanomedicines.

CH09 L24 INDUSTRIAL POLLUTION CONTROL

Teaching scheme

Credits: 4

3 hours lecture & 1 hour tutorial per week

Objectives

- To impart the basic concepts of industrial pollution control
- To develop understanding about water, air, light pollution control

No Pre-requisites

Module 1 (13hours)

Classification of industrial wastewater - types of pollutants and their effects - monitoring and analysis methods - water pollution laws and standards - industrial wastewater treatment - processes and equipment

Module 2 (13hours)

Water pollution control in industries - pulp and paper, textile processing, tannery wastes, dairy wastes, cannery wastes, brewery, distillery, meat packing, food processing wastes, pharmaceutical wastes, chlor-alkali industries, fertilizer industry, petrochemical industry, rubber processing industry, starch industries, metal industries, nuclear power plant wastes, thermal power plant wastes.

Module 3 (13hours)

Air pollution control in industries: source and classification of industrial air pollutants - monitoring equipment and method of analysis - damages to health, vegetation and materials - air pollution laws and standards - treatment method in specific industries - thermal power plants - cement - fertilizers - petroleum refineries - iron and steel - chlor-alkali - pulp and paper

Module 4 (13hours)

Industrial odour control - sources and solutions - odour control by adsorption and wet scrubbing - industrial noise control methods - sludge treatment and disposal - industrial hazardous waste management, waste minimization. Environmental Impact Assessment and risk assessment-Environmental Audit and Environmental management system- Concept of common effluent treatment plants.

Internal Continuous Assessment (*Maximum Marks-30*)

60% - Tests (minimum 2)

30% - Assignments (minimum 2) such as home work, problem solving, group discussions, quiz, literature survey, seminar, term-project, software exercises, etc.

10% - Regularity in the class

University Examination Pattern

PART A: Short answer questions (one/two sentences)

5 x 2 marks=10 marks

All questions are compulsory. There should be at least one question from each module and not more than two questions from any module.

PART B: Analytical/Problem solving questions

4 x 5 marks=20 marks

Candidates have to answer four questions out of six. There should be at least one question from each module and not more than two questions from any module.

PART C: Descriptive/Analytical/Problem solving questions

4 x 10 marks=40 marks

Two questions from each module with choice to answer one question.

Maximum Total Marks: 70

EE09 L 22 SOFT COMPUTING TECHNIQUES

Teaching scheme

3 hours lecture and 1 hour tutorial per week

Credits: 4

Objectives

- *To acquaint the students with the important soft computing methodologies- neural networks, fuzzy logic, genetic algorithms and genetic programming*

Module I (12 Hours)

Artificial Intelligent systems – Neural Networks, Fuzzy Logic and Evolutionary Programming concepts. Artificial Neural Networks – Biological neural networks – Model of an artificial neuron- Comparison between biological neuron and artificial neuron– Basic models of artificial neural network –Learning methods – - Activation function and terminologies of ANN- - Mc Culloch Pitts Neuron – Linear Separability – Hebb network – Perceptron Networks , Adaline, Madaline.

MODULE II (14 Hours)

Back propagation Networks : Architecture - Multi layer perceptron –Back propagation learning – Input layer, Hidden Layer , Output Layer computations, Calculation of error, Training of ANN, Back propagation Algorithm, Momentum and Learning rate, Selection of various parameters in BP networks- Radial Basis Function Networks [T. B. 1].

Variations in standard BP algorithms – Decremental iteration procedure, Adaptive BP, GA based BP, Quick prop training, Augmented BP networks, Sequential learning Approach for single hidden layer Neural networks.

Module III (14 Hours)

Fuzzy sets and crisp sets-Fuzzy sets –Fuzzy set operations-Fuzzy relations-Membership functions – Features of the membership functions-Fuzzification-Methods of membership value assignments-Defuzzification- Defuzzification methods-Fuzzy Rule Base and approximate reasoning- Truth values and tables in fuzzy logic, Fuzzy propositions, Formation of rules, Decomposition of rules, Aggregation of fuzzy rules- Fuzzy Inference Systems- Construction and Working Principle of FIS- Methods of FIS- Mamdani FIS and Sugeno FIS- Fuzzy Logic Control Systems- Architecture and Operation of FLC System- FLC System Models- Application of FLC Systems.

Module IV (14 Hours)

Genetic Algorithms- Basic Concepts- Creation of off- springs- Working Principle- Encoding-Fitness function- Reproduction- Roulette- Wheel Selection, Boltzmann Selection- Tourna-

ment selection- Rank Selection- Steady- State Selection- Elitism- Generation gap and steady state replacement- Inheritance operators- Cross Over- Inversion and deletion- Mutation Operator- Bit- wise operators- Generational Cycle- Convergence of Genetic Algorithm- Differences and Similarities between GA and other traditional methods- Applications.

5. D.E. Goldberg, *Genetic Algorithms in search, Optimization and Machine Learning*, Addison Wesley MA, 1989.

Internal Continuous Assessment (Maximum Marks-30)

60% - Tests (minimum 2)

30% - Assignments (minimum 2) such as home work, problem solving, group discussions, quiz, literature survey, seminar, term-project, software exercises, etc.

10% - Regularity in the class

Note: One of the assignments may be simulation of systems using any technical software

University Examination Pattern

PART A: Short answer questions (one/two sentences) 5 x 2 marks=10 marks

All questions are compulsory. There should be at least one question from each Module and not more than two questions from any Module.

PART B: Analytical/Problem solving questions 4 x 5 marks=20 marks

Candidates have to answer four questions out of six. There should be at least one question from each Module and not more than two questions from any Module.

PART C: Descriptive/Analytical/Problem solving questions 4 x 10 marks=40 marks

Two questions from each Module with choice to answer one question.

Maximum Total Marks: 70

EE09 L 25 ROBOTICS AND AUTOMATION

Teaching scheme

3 hours lecture and 1 hour tutorial per week

Credits: 4

Objectives

- To give an introduction of industrial robotics and automation

Module I (14 Hours)

Automation and Robotics - Robotics in Science Fiction - A Brief History of Robotics - The Robot and Its Peripherals-Robot Activation and Feedback Components - Position Sensors - Velocity Sensors - Actuators - Power Transmissions Systems - Robot Joint Control Design- Introduction to Manipulator Kinematics - Homogeneous Transformations and Robot Kinematics -Manipulator Path Control - Robot Dynamics - Configuration of a Robot Controller.

Module II (13 Hours)

Types of End Effectors - Mechanical Grippers - Other Types of Grippers - Tools as End Effectors - The Robot/End Effector Interface - Considerations in Gripper Selection and Design - Sensors in Robotics - Tactile Sensors - Proximity and Range Sensors - Miscellaneous Sensors and Sensor-Based Systems - Uses of Sensors in Robotics - Introduction to Machine Vision - The Sensing and Digitizing Function in Machine Vision - Image Processing and Analysis - Training and Vision System - Robotic Applications.

Module III (14 Hours)

Methods of Robot Programming – Lead through Programming Methods - A Robot Program as a Path in Space - Motion Interpolation - WAIT, SIGNAL, and DELAY Commands - Branching - capabilities and Limitations of Lead through Methods - The Textual Robot Languages - Generations of Robot Programming Languages - Robot Language Structure - Constants, Variables, and Other Data Objects - Motion Commands - End Effector and Sensor Commands - Computations and operations - Program Control and Subroutines - Communications and Data Processing - Monitor Mode Commands.

Module IV (13 Hours)

Introduction to robot intelligence and task planning- state space search-problem reduction-use of predicate logic-means –end analysis-problem-solving –robot learning-robot task planning-expert systems and knowledge learning.

Text Books

1. Mikell P. Groover- et. Al, *Industrial robotics, Technology, programming and Applications*, McGraw Hill
2. K. S. Fu, R. C. Gonzalez, C. S. G. Lee, *Robotics, Control, Sensing and Intelligence*, McGraw Hill

Internal Continuous Assessment (Maximum Marks-30)

60% - Tests (minimum 2)

30% - Assignments (minimum 2) such as home work, problem solving, group discussions, quiz, literature survey, seminar, term-project, software exercises, etc.

10% - Regularity in the class

University Examination Pattern

PART A: Short answer questions (one/two sentences) 5 x 2 marks=10 marks

All questions are compulsory. There should be at least one question from each Module and not more than two questions from any Module.

PART B: Analytical/Problem solving questions 4 x 5 marks=20 marks

Candidates have to answer four questions out of six. There should be at least one question from each Module and not more than two questions from any Module.

PART C: Descriptive/Analytical/Problem solving questions 4 x 10 marks=40 marks

Two questions from each Module with choice to answer one question.

Maximum Total Marks: 70

ME09 L25: Energy Engineering and Management

Teaching scheme

3 hours lecture and 1 hour tutorial per week

Credits: 4

Objectives

- To provide knowledge on energy conservation and management.
- To impart the basics of renewable energy technology

Pre-requisites: Nil

Module I (13 hours)

Energy and environment: Introduction – fossil fuel reserves – world energy consumption – green house effect – global warming – renewable energy sources – environmental aspects utilization – energy prices – energy policies

Module II (14 hours)

Energy conservation: Industrial energy use – energy surveying and auditing – energy index – energy cost – energy conservation in engineering and process industry, in thermal systems, in buildings and non conventional energy resources schemes.

Module III (14 hours)

Energy technologies: Fluidized bed combustion – fluidized bed boilers – waste heat recovery systems – heat pump and refrigerators – wind energy collectors and storage systems – insulated pipe work systems.

Module IV (13 hours)

Energy management: Energy management principles – energy resources management – energy management information systems – computerized energy management. Costing techniques – cost optimization – optimal target investment schedule – financial appraisal and profitability.

Text Books

1. W. R. Murphy, G. Mc Kay, *Energy Management*, Butterworths, London

Reference Books

Candidates have to answer four questions out of six. There should be at least one question from each module and not more than two questions from any module.

PART C: Descriptive/Analytical/Problem solving questions 4 x 10 marks=40 marks

Two questions from each module with choice to answer one question.

Maximum Total Marks: 70

AI09-L23 Micro Electro Mechanical Systems

Teaching scheme	Credits: 4
3 hours lecture and 1 hour tutorial per week	

Objective

To introduce the following concepts to the students

- manufacturing of a micro device from material selection to final product design
- the various materials used in microfabrication and their applications
- how basic engineering design can couple with practice manufacturing techniques for getting a MEMS device
- the changes in properties when the dimensions of the system are scaled

Module I (11 hours)

MEMS and microsystems: MEMS and microsystem products – evaluation of microfabrication – microsystems and microelectronics – applications of microsystems – working principles of microsystems – microsensors – microactuators – MEMS and microactuators – microaccelerometers.

Scaling laws in miniaturization: Introduction – scaling in geometry – scaling in rigid body dynamics – the Trimmer force scaling vector – scaling in electrostatic forces, electromagnetic forces, scaling in electricity and fluidic dynamics, scaling in heat conducting and heat convection.

Module II (13 hours)

Materials for MEMS and microsystems: Substrates and wafers – Silicon as a substrate material, ideal substrates for MEMS – single crystal Silicon and wafers crystal structure – mechanical properties of Si – Silicon compounds – SiO₂, SiC, Si₃N₄ and polycrystalline Silicon – Silicon piezoresistors – Gallium arsenide, quartz – piezoelectric crystals – polymers for MEMS – conductive polymers.

Engineering mechanics for microsystems design: Introduction – static bending of thin plates – circular plates with edge fixed, rectangular plate with all edges fixed and square plates with all edges fixed. Mechanical vibration - resonant vibration – microaccelerometers – design theory and damping coefficients. Thermomechanics – thermal stresses. Fracture mechanics – stress intensity factors, fracture toughness and interfacial fracture mechanics.

Module III (16 hours)

Basics of fluid mechanics in macro and meso scales: Viscosity of fluids – flow patterns Reynolds number. Basic equation in continuum fluid dynamics – laminar fluid flow in circular conduits – computational fluid dynamics – incompressible fluid flow in microconduits, surface tension, capillary effect and micropumping - Fluid flow in submicrometer and nanoscale – rarefield gas, Knudsen and Mach number and modelling of microgas flow – heat conduction in multilayered thin films – heat conduction in solids in submicrometer scale - Thermal conductivity of thin films - heat conduction equation for thin films.

Microsystem fabrication process: Photolithography – photoresist and applications – light sources. Ion implantation – diffusion process – oxidation – thermal oxidation – silicon diode – thermal oxidation rates – oxide thickness by colour - Chemical vapour deposition - principle – reactants in CVD – enhanced CVD physical vapour deposition – sputtering – deposition by epitaxy – etching – chemical and plasma etching.

Module IV (12 hours)

Micromanufacturing and microsystem packaging: Bulk Micromachining - Isotropic And Anisotropic Etching, Wet etchants, etch stops, dry etching comparison of wet and dry etching - Surface micromachining, process in general – problems associated surface micromachining - The LIGA process – description – materials for substrates and photoresists – electroplating – The SLIGA process. Microsystem packaging - General considerations - The three levels of microsystem packaging – die level, device level and system level – essential packaging technologies – die preparation – surface bonding wire bonding and sealing - Three dimensional packaging, assembly of microsystems – selection of packaging materials.

Two questions from each module with choice to answer one question.

Maximum Total Marks: 70

AI09-L25:Probability and Random Processes

Teaching scheme

3 hours lecture and 1 hour tutorial per week

Credits: 4

Objective

- To impart knowledge on tools and skills in probability theory for solving engineering problems

Module I (12 hours) Introduction to Probability Theory

Experiments – sample spaces and Events – axioms of Probability – Assigning Probabilities – joint and conditional probabilities – Baye's theorem – independence - Discrete random variables – Bernoulli – Binomial – poisson - Geometric

Module II (14 hours) Random Variables, Distributions and density functions

The Cumulative distribution function - Probability density function – gaussian Random variable – Uniform random variable – exponential –Laplace – gamma – erlang –Chi – squared –Rayleigh –Rician –Cauchy

Module III (14 hours) Operations on a single Random Variable

Expected value of a random variable - expected values of functions of random variable – Moments – central moments – conditional expected values – probability generating functions –Moment generating functions

Module IV (14 hours) Random Processes

Definition and classification of Processes – Mathematical tools for studying random processes – stationary and ergodic random processes – Properties of the Auto correlation function – gaussian random processes- Definition and examples of Markov Processes - calculating transition and state probabilities in Markov chains

Maximum Total Marks: 70

AN09 L25 RESEARCH METHODOLOGY

Teaching scheme

3 hours lecture and 1 hour tutorial per week

Credits: 4

Objective

To give an exposure to the major aspects of research and research approaches.

MODULE 1 (13hours)

Introduction – meaning of research- objectives of research-motivation in research- types of research-research approaches – significance of research- research methods Vs methodology – criteria for good research

MODULE 2(14hours)

Defining research problem- what is a research problem- selecting the problem-necessity of defining the problem- literature review – importance of literature review in defining a problem- critical literature review – identifying gap areas from literature review

MODULE 3 (14hours)

Research design–meaning of research design-need–features of good design- important concepts relating to research design- different types – developing a research plan

Method of data collection–collection of data- observation method- interview method-questionnaire method – processing and analyzing of data- processing options- types of analysis- interpretation of results

MODULE 4 (13hours)

Report writing – types of report – research report , research proposal, technical paper-significance- different steps in the preparation – lay out, structure and language of typical reports- simple exercises - oral presentation – planning, preparation, practice- making presentation – answering questions-use of visual aids-quality and proper usage-Importance of effective communication with illustrations.

IC09 L25 Aerospace Engineering and Navigation Instrumentation

Teaching scheme

3 hours lecture and 1 hour tutorial per week

Credits: 4

Objectives:

To expose the students to the field of aerospace engineering and to impart basic knowledge of its navigation instrumentation.

Prerequisites

Familiarity with control system theory and basic concepts of instrumentation

Module I (15 Hours)

History of aviation and space flight- anatomy of airplane and space vehicle with emphasis on control surfaces- airfoil nomenclature- basics of aerodynamics to illustrate lift and drag- types of drag – finite wings – swept wings –flaps. Airplane performance- thrust –power- rate of climb- absolute and service ceiling- range and endurance. Introduction to turbojet and turbofan engines. Space vehicle trajectories- kepler’s laws- rocket engines, propellents and staging.

(Introductory treatment of the above topics is only expected, no detailed derivations)

Module II (11 Hours)

Basic engine instruments- Capacitive fuel content- Gauges. Standard atmosphere- Altimeters- Aneroid and radio altimeters. Aircraft compass- Remote indicating magnetic compass- Rate of climb indicator- Pitot static system- Air speed indicator- Mach meters- Integrated flight instruments- Flight testing- Recording of flight tests.

Module III (13 hours)

Command and homing guidance systems- Introduction to classical and modern guidance laws- Satalite navigation systems- GPS and GNSS, Augmented satellite navigation- Hybrid navigation concepts.

Automatic Pilots- Sun sensors- Horizon scanner- Aircraft flight simulation instrumentation.

Module III (15 hours)

Introduction to navigation and guidance instrumentation- Principle, construction and applications of inertial sensors- Gyroscope and accelerometers- Ring laser gyroscope- Fiber optic gyroscope, MEMS gyroscopes and accelerometers- Directional gyros- Rate gyros- Turn and slip indicator. Radar- continuous wave and frequency modulated radar- MTI and pulse Doppler radar

Internal Continuous Assessment (Maximum Marks-30)

60% - Tests (minimum 2)

30% - Assignments (minimum 2) such as home work, problem solving, group discussions, quiz, literature survey, seminar, term-project, software exercises, etc.

10% - Regularity in the class

University Examination Pattern

PART A: Short answer questions (one/two sentences)

5 x 2 marks=10 marks

All questions are compulsory. There should be at least one question from each module and not more than two questions from any module.

PART B: Analytical/Problem solving questions

4 x 5 marks=20 marks

Candidates have to answer four questions out of six. There should be at least one question from each module and not more than two questions from any module.

PART C: Descriptive/Analytical/Problem solving questions

4 x 10 marks=40 marks

Two questions from each module with choice to answer one question.

Maximum Total Marks: 70

CE09 L23 EXPERIMENTAL STRESS ANALYSIS

Teaching scheme

3 hours lecture and 1 hour tutorial per week

Credits: 4

Objective

To make students aware of various measurement techniques and experimental planning and procedures adopted in laboratory

Module I (14 hours)

Strain gauges - definition of gauge length - sensitivity and range - characteristics of an ideal strain gauge - different types of mechanical strain gauges, optical strain gauge - acoustic strain gauge - pneumatic strain gauge - merits and demerits - electrical strain gauges - inductance, capacitance and piezo electric gauges - bonded and unbonded resistance gauges and their application in stress analysis - fixing techniques and measurement of strains - rosettes - determination of principal stress - construction of stress, strain circles - analytical solution

Module II (13 hours)

Photo elasticity - basics of optics, stress optic law - plane and circularly polarized light and their use in photos elasticity - polariscopes - diffusion type - lens type polariscopes - isoclinics and isochromatics

Module III (14 hours)

Model materials - calibration methods for finding material fringe values - model fringe values - examples of beam flexure and diametrically loaded circular plates.
Non Destructive Testing Methods – Ultrasonic Methods – Hardness methods – Rebound Hammer – Detection of embedded reinforcement.
Computer based data acquisition systems.

Module IV (13 hours)

Model analysis - direct and indirect models - laws of structural similitude - choice of scales - limitation of model studies - buckingham pi-theorem - dimensional analysis - model materials - Begg's deformater and its use - simple design of direct and indirect models
