## About us

Do-NAMs Innovations is a start up by 3 young Engineers having a combined experience of more than 25 years. Our effort will be to study the need in Education and Renewable energy domian to provide advanced technology based solutions to improve the quality of living of common man. Our vision I sto give back useful  products to the society from which we derived our knowledge and expeirnce. We at Do-NAMs belive that all innovations are output of passionate efforts till achieving the goal, so we are confident in delivering quality products for the society.

## VidhyaDhan<sup>TM</sup>

VidhyaDhan$^{TM}$ is a tool to analyze and improve the performnce of students. As per our studies an survey we found that most of students are selecting the course fot their higher studies and even their career without enough knowledge about their field. They are not able to find the jobs which is matching their skills. Skill set mapping tools like psychometric analysis and aptitude test are not raeching them, even if reaching it is done as a one time event and won't be compared with their acedemic performance. VidhyaDhan will use the advance developemnt in data science technolgy to analyze and advice the students, to identify the skill of students by propoerly analysing their academic performance along with pschycometric analysis and aptitude test. VidhyaDhan will also do their exam performance analysis and with inputs to improva their performance. It will act as a easy data communication channel with daily, weekly and monthly SMS to push different information to improve students  skill.

## Students data-Logger

Students data-logger is a hardware tool which will help teachers/faculties to enter an store the students data's like attendance, marks of students, extra ciricular activities etc and can genetrated required reports for analysis. As per present system in most of the institues the daily process of taking attendenace is offline, teachers are taking the same in a book and then transfering this to computers. This will consume lot of time and energy of teachers. Exam mark storage and report card geenration is also an headache to teachers as they are doing it manually. Students data logger will allow teachers to take the daily attendance of students by  just selecting the absent students name, daliy attendance report will be generated automatically and sms will go to absenteese parents. For mark entry also teachers can use data-logger. Mark cards,  Progress reports and Performance analysis will be generated automatically.

## e-Slate<sup>TM</sup>

e-Slate$^{TM}$ is a writing meduim to  replace the present paper note book based system. In the evolution of writing medium we can see a upgradtion in every 30 to 40 years, from stone to leafs, leafs to slates and from slates to paper based books. We forsee the next revolution in writing medium as cloud based dedicated touch-pads which can be used as notebooks. Already this type of writing medium is used in high end companies and in institues. But we like to revolutionilze this with e-Slate$^{TM}$ which will be

financially viable for common man. e-Slate will be having colud connectivity such that all the data's can be stored in cloud and also locally as per requirement. The taechers and institues wil be having data pushing option to  e-Slate such that students will get live updates.
