Company Profile

ThoughtWorks is a global IT company with an exclusive focus on end-to-end global software development and delivery using advanced tools, such as:

Java / J2EE

C# / .NET

Ruby

Agile Methodologies

EAI technologies like Tibco, MQSeries & MSMQ

Web Services

The company's leadership in the practical application of agile methods on enterprise class projects allows its people to deliver higher quality solutions more quickly and cost effectively, while giving client business leaders greater program and project control. ThoughtWorks kick-started the Agile business era with pioneering IT consulting, and industry leading tools like Selenium, the web testing framework, and CruiseControl, the first continuous integration server.

With about 2800 people and growing, ThoughtWorks is establishing itself as a world leader in delivering the most complex enterprise applications. Our clients represent the top tier of global industry, which are predominantly Global 1000 firms. ThoughtWorks is recognized by leading industry analysts such as Forrester Research and the Gartner Group for our thought leadership, particularly in Agile methods and technical innovation. Many ThoughtWorkers have authored best-selling books on various subjects such as Extreme Programming, Enterprise Architecture, Agile Database Design, Open Source Programming etc. In line with its philosophy of revolutionizing IT, ThoughtWorks contributes and encourages its employees to contribute wholeheartedly to open source projects. ThoughtWorks India is home to quite a few of these contributions. To name a few:

- SWTbot is an open-source Java based functional testing tool for testing SWT and Eclipse based applications.

- White helps with automating Windows applications based on win32, WPF, WinForms and SWT.

- Frankenstein is a functional testing tool for Swing applications, whose focus is on readable, simple, fast functional tests that can be shared and run by everyone on a team.

- Migrator is a Java based database migration tool that supports evolutionary database design

The company's leadership in the practical application of agile methods on enterprise class projects allows its people to deliver higher quality solutions more quickly and cost effectively, while giving client business leaders greater program and project control.
